DIT UNIVERSITY Dehradun

Detailed Course Structure & Syllabus of B.A. (Hons.)- Economics

Course Structure

Year: 1st Semester:I

Course Category	Course Code	Course Title	L	Т	Р	Credit
UC	ECO106	Micro Economics I	5	1	0	6
UC	ECO107	Macro Economics I	5	1	0	6
GE I	ECO146/147	Generic Elective I	5	0	0	5
AEC	HS103	Professional Communication	2	0	2	3
		Total				20

Year:1st Semester:II

Course Category	Course Code	Course Title	L	Т	Р	Credit
UC	ECO108	Micro Economics II	5	1	0	6
UC	ECO109	Macro Economics II	5	1	0	6
UC	ECO116	Mathematical Methods for Economics I	5	1	0	6
GE II	ECO148/149	Generic Elective II	5	1	0	6
AEC	CH201	Environmental Science	2	0	0	2
		Total				26

Generic Elective-I

ECO146- Indian Economy I
ECO147- Energy Economics

Generic Elective-II

ECO148- Computer Applications in Economic Analysis
ECO149- Regional Economics

Year: 2nd Semester: III

Course Category	Course Code	Course Title	L	Т	Р	Credit
UC	ECO206	Development Economics I	5	1	0	6
UC	ECO207	Statistics for Economic Analysis I	5	1	0	6
UC	ECO208	Mathematical Methods for Economics II	5	1	0	6
GE III	ECO 246/247/248	Generic Elective III	5	1	0	6
SEC I	ECO209	Application of Statistical Software in Economic Analysis	2	0	0	2
	Total					26

GenericElective-III

ECO246- Behaviora	l Economics
ECO247- Indian Eco	onomy II
ECO248- Indian Eco	onomy II

Year: 2nd Semester: IV

Course Category	Course Code	Course Title	L	Т	Р	Credit
UC	ECO216	Development Economics II	5	1	0	6
UC	ECO217	Statistics for Economic Analysis II	5	1	0	6
GE IV	ECO 249/256	Generic Elective IV	5	1	0	6
SEC II	HS446	Industrial Psychology	2	0	0	2
Total						20

GenericElective-IV

ECO249- Contemporary Economic Issues
ECO256- Introduction to Research Methods

Year:3rd Semester:V

Course Category	Course Code	Course Title	L	Т	Р	Credit
UC	ECO306	International Economics	5	1	0	6
UC	ECO307	Econometrics	5	1	0	6
DSE I	ECO346/347	Discipline Specific Elective I	5	1	0	6
DSE II	ECO 348/349	Discipline Specific Elective II	5	1	0	6
Total						24

Discipline Specific Elective-I

ECO346- Agricultural Economics
ECO347- History of Economic Thought

Discipline Specific Elective-II

ECO348- Financial Economics
ECO349- Political Economy

Year:3rd Semester:VI

Course Category	Course Code	Course Title		L	Т	Р	Credit
UC	ECO308	Money and Banking		5	1	0	6
UC	ECO309	Public Finance		5	1	0	6
DSE III	ECO356/357	Discipline Specific Elective III		5	1	0	6
DSE IV	ECO358/359	Discipline Specific Elective IV		5	1	0	
	ECO366	Research Project		0	0	12	6
Total						24	

Discipline SpecificElective-III

ECO356- Environmental Economics
ECO357- Labour Economics

Discipline SpecificElective-IV

ECO358- Economics of Health and Education
ECO359- Comparative Economic Development

Summary of the Credit

Category	Semester	Credit
1	1	20
1	2	26
2	3	26
2	4	20
3	5	24
3	6	24
Total		140

Subject Code	ECO106	Subject Title			MICRO ECON	OMICS-I			
LTP	5-1-0	Credit	6	Subject Category	UC	Year	1 st	Semester	<u> </u>

Course Objective:

- To give the students a thorough understanding of the principles of economics that apply to the decisions of individuals--both consumers and producers--within the larger economicsystem.
- To give primary emphasis on the nature and functions of product markets, and to include the study of factor markets and the role of government in promoting greater efficiency and equity in theeconomy.
- To introduce economic analysis of individual, business, and industry choices in the market economy.

UNIT 1: Introduction and Basic concepts

(10Lectures)

Definition & Meaning, Nature and scope of micro economics, Basic Economic Problem - Choice and Scarcity, Methodology of Economics -Inductive and Deductive methods, Positive vs. Normative Economics, Static and Dynamic Analysis, Partial vs. General Equilibrium Analysis.

UNIT 2:Demand&Supply (10Lectures)

Demand analysis: Law of Demand, demand of a firm and Market; Elasticity of Demand - Price, Cross and Income Elasticity of Demand - Measurement of price Elasticity of Demand; Consumer Behaviour: Theories of Demand;

UNIT 3:ConsumerTheory (10Lectures)

Introduction, Utility, Cardinal Utility approach Budget Constraint, Opportunity cost, Preferences; Indifference curve, Consumers equilibrium. Price, Income and Substitution effects (Hicks Allen & Slutsky method), Revealed Preference Theory.

UNIT 4: Theory of production and cost

(12 Lectures)

Production Function - The Law of Variable Proportions; Returns to Scale-Isoquant; Least Cost Combination and Producer's Equilibrium, Traditional and Modern theories of Costs, Cost-output relation.

UNIT 5: Price and output determination

(10 Lectures)

Prefect competition: Features, Price determination in short and long run Equilibrium of Firm and Industry, Monopolistic competition – features, equilibrium of the firm with product differentiation and selling cost. Monopoly: Price and output determination, Price discrimination, BilateralMonopoly

Learning Outcome

- Students would be familiar with basic theories ofmicroeconomics
- Students would be capable to apply economic theories to industrial problems.

Text book [TB]:

- **1.** N. Gregory Mankiw, *Economics: Principles and Applications*, India edition by South Western, a part of Cengage Learning, Cengage Learning India PrivateLimited.
- 2. Ahuja, H.L. (2006): Moden Microeconomics: Theory and Aaplications, Sultan Chand and Co., NewDelhi.

- 1. Koutsoyiannis, A: (1979): Modern Microeconomics (2nd ed), Macmillan Press, London.
- 2. Sen, A (1999): Microeconomics: Theory and Applications, Oxford University Press, NewDelhi.
- 3. Karl E. Case and Ray C. Fair, *Principles of Economics*, Pearson Education, Inc.,8th edition, 2007
- 4. Snyder and W. Nicholson, Fundamentals of Microeconomics, Cengage (India), 2010

Subject Code	ECO107	Subject Title			MACRO ECO	ONOMICS	5-I		
LTP	5-1-0	Credit	6	Subject Category	UC	Year	1 st	Semester	

Course Objective:

- This course aims to introduce the students to the basic concepts of Macroeconomics and explains how Macroeconomics deals with the aggregateeconomy.
- This course discusses the preliminary concepts associated with the determination and measurement of aggregate macroeconomic variable like savings, investment, GDP, money, inflation, and the balance of payments.

UNIT 1: Introduction and Basic concepts

(10 Lectures)

Introduction: Nature and Scope of Macro Economics, Difference between Micro and Macro Economics and Importance of MacroEconomics.

National Income: Concepts, Measurement and limitations of National Income Statistics, Circular flow of income in two, three and four sector economy.

UNIT 2: Determination of IncomeandEmployment

(10 Lectures)

Classical theory of Income and Employment determination, Keynes objections to Classical Theory, Keynesian Theory of Income and Employmentdetermination.

UNIT 3:Consumption (10 Lectures)

Consumption-Consumption Function, Technical Attributes of Consumption, Keynesian Psychological Law of Consumption and its Implications.

Income – Consumption Relationship: Absolute and Relative Income Hypothesis and Permanent Income Hypothesis

UNIT 4:InvestmentFunction

(12 Lectures)

Investment Function: Types of Investment, Determination of level of Investment, Marginal Efficiency of Capital (MEC).

UNIT 5: TheoriesofInvestment

(10 Lectures)

Theories of Investment: Classical and Keynesian Theory of Investment (Marginal Efficiency of Investment), Saving –Investment Equality.

Learning Outcome

- Students will be able to understand the concept of Income and Employment and investment with appropriate theoretical insights and validate theory with empirical data.
- Students will be able to understand the factors determining Gross Domestic Product, Employment, The General Level of Prices and InterestRates.

Text book [TB]:

- **1.** N. Gregory Mankiw, *Economics: Principles and Applications*, India edition by South Western, a part of Cengage Learning, Cengage Learning India PrivateLimited.
- 2. Ahuja, H.L. (2006): Moden Microeconomics: Theory and Aaplications, Sultan Chand and Co., NewDelhi.

- 1. Andrew B. Abel and Ben S. Bernanke, Macroeconomics, Pearson Education, Inc.,7th edition, 2011.
- 2. Olivier Blanchard, Macroeconomics, Pearson Education, Inc., 5th edition, 2009.
- 3. Lipsey R.G. and K.A. Christal (1999) —Principles of Economics|| 9th Ed., Oxford University Press.
- 4. Stiglitz J. E. and Carl E. Walsh (2002), Principles of Macroeconomics, W.W. Norton and Company, NewYork

Subject Code	ECO146	Subject Title		Indian Ec	conomy I				
LTP	5-0-0	Credit	6	Subject Category	GE I	Year	1 st	Semester	I

Course Objective:

- Application of Economic Theory in the context of India's Economic Growth and Development.
- To explore a set of inter related issues relating to the growth and development of the Indian Economy.
- To enable students to have an understanding of the various issues/components of the Indian economy so that they are able to comprehend and critically appraise current Indian economics problems.

UNIT 1: Introduction toIndianEconomy

(10 Lectures)

Introduction to Indian Economy – Basic characteristics and features of Indian economy. Economic Planning in India: Features, Objectives and Assessment of Indian Planning. (Plan Wise details to be excluded).

UNIT 2: Demographic features of India's population

(10 Lectures)

Demographic features of India's population. Inter-state disparities in the pattern of development. Structural Change in the distribution of Income and Workforce in India.

UNIT 3: Poverty And UnemploymentInIndia

(10 Lectures)

Poverty And Unemployment In India. Programmes for Eradication of Poverty And Unemployment With Special Reference To The Post – Reform Era.

UNIT 4:IndianAgriculture

(12Lectures)

Agriculture: Features of Indian Agriculture. Impact of Green Revolution on Indian Agriculture. Recent Trends in Agricultural Development -- Causes of Deceleration and Future Challenges

UNIT 5: Industrial policiesinIndia

(10 Lectures)

Making of Industrial policies in India, continuity and change FERA to FEMA, De-licensing, disinvestment SMEs-growth, structure, policy performance, dualism, labourabsorption

Learning Outcome

- The student will be able to develop better Understanding regarding the various aspects of India's Economy and develop a perspective on the different problems and approaches to economic planning and development in India.
- The student will understand the role of the Indian Economy in the global context, and how different factors have affected this process.
- The student will be able to understand various issues related to economic condition of India, analyze the
 economic development of India, analyze the various policies / programmes run by the government for
 improving the economic condition.

Text book [TB]:

- 1. Lucas, E.B., and Papanek, G.F.: The Indian Economy- Recent Developments and (eds.) 1988 Future Prospects, Oxford University Press, NewDelhi.
- 2. Dutt.R, (2006): Indian Economy, Sultan Chand and Co., NewDelhi.

- 1. Brahmananda, P.R. and Panchmukhi: The Development Process of Indian Economy, V.R. (eds.) 1987 Himalaya Publishing House, Bombay.
- 2. Jalan, Bimal 1992: The Indian Economy Problem and Prospects, Viking, NewDelhi.
- 3. Byres, T J (Ed.) (1998): The Indian Economy: Major Debate Since Independence,Oxford University Press, NewDelhi.
- 4. Economic Survey: Government of India. VariousIssues.
- 5. Economic and Political Weekly: Various Issues

Subject Code	ECO147	Subject Title		Energ	y Economics				
LTP	5-0-0	Credit	6	Subject Category	GE I	Year	1 st	Semester	I

Course Objective:

- To provide students with a thorough grounding in the key concepts of energyeconomics.
- To illustrate how these concepts and standard economic tools can be used to analyses energy- related policyissues.
- To be able to apply this knowledge to the analysis of specific energy issues inIndia

UNIT 1:Introduction (10Lectures)

Energy and economics; History of energy use; Trends in energy production and consumption; Economic efficiency, growth, and modeling; Role of energy in development and growth; Economic theory of natural resource extraction; The primary (extractive) energy industries (oil and natural gas); The electric utilityindustry

UNIT 2: Natural Resources and Energy Source

(10 Lectures)

Electric utility and regulation; Renewable energy sources and energy conservation; Energy and air pollution; Global effects of energy use; Energy issues in India; Energy policy instruments; Distributional incidence of energy taxes and subsidies; Technology assessment and risk analysis; Defining Sustainability; What is sustainable energy consumption? Concept of green accounting; Low carbon options

UNIT 3: AllocationofResources

(10 Lectures)

Depletable and renewable- energy, minerals, water, land and rivers; Classification of resources; Natural resource Cartels: An example of OPEC; Concepts of energy pricing; Average and Marginal cost pricing; Peak and off-peak pricing; Cross-Subsidization

UNIT 4:EnergyDemand (8Lectures)

Theoretical background: Derived energy demand; Consumer demand; Producer demand; Types of econometric demand models; Issues treated by demand models; Capital-energy substitutability; Technical change; Scale effects; Short-run versus long-run analysis; Disequilibrium and rationing; Time of day, seasonal, and blockpricing

UNIT 5: Economics of Energy Supply

(10 Lectures)

Economic theory of depletable resources; How much of a resource would be extracted? What would be the timing of extraction? What would be market price pattern over time? What timing of extraction should be best for society? How do market determined and socially optimal rates compare? How market changes- higher interest rates, changed expectations, varying market structures, taxes-change patterns of extraction? What is the nature of the supply function for depletable resources; Discussion on Peak oil; Strategies for modelling exhaustible resource; Estimation of cost functions; Computational equilibrium models; Econometric models of exhaustible resource supply; Economic theory of renewable energy supply; Economics of solar, wind, Hydro and bio-fuels; Economic of oil refining; Economics of power generation.

Learning Outcome

- The course would provide an understanding of economic concepts and theories related to the supply and utilization of energy resources, and technologies at various levels- economy, firm and individual.
- In this course would be helpful to apply economic tools and frameworks and use empirical data for economic analysis in the energy systems domain to support and influence decision making in the context of resource planning, energy efficiency, climate change and sustainabledevelopment.

Subje Cod		Subject Title			Professional (Communi	cation		
LTI	2-0-2	Credit	3	Subject Category	AEC	Year	1 st	Semester	I

Course Objective:

- To develop the LSRW skills of students for effective communication
- To equip the students for businessenvironment
- To prepare the students understand and present themselves effectively

UNIT1:Communication (5Lectures)

Communication: Meaning, Types of Communication: General & Technical Communication, Knowledge and adoption of Non Verbal cues of communication: Kinesics, Proxemics, Chronemics, Oculesics, Haptics, Paralinguistics, Barriers to Communication, Overcoming strategies.

UNIT 2: Listening & Speaking Skills

(4 Lectures)

Listening Comprehension: identifying General & Specific information, Note taking and drawing inferences, Introduction to Phonetics: Articulation of consonants and vowel sounds.

UNIT 3: Reading Skills & TechnicalWritingSkills

(10Lectures)

Reading Strategies and Vocabulary Building Reading Comprehension, Paragraph development, Intra office Correspondence: Notice, Agenda, Minutes and Memorandum ,Technical Proposal & Report

UNIT 4: BusinessLetter Writing

(7Lectures)

Business Letter Writing, Job Application Letter & Resume, Interview Skills, Impression Management Swot Analysis (Identifying Strength & Weakness), EQ and Its Dimensions

Learning Outcome

At the end of this course -

The student will be able to

- CO 1 Communicates moothly
- CO 2 Write formaldocuments
- CO 3 Present themselveseffectively

Text book [TB]:

- 1. Rizvi, Ashraf. Effective Technical Communication, McGraw Hill, New Delhi.2005.
- 2. Raman, Meenakshi and Sangeeta Sharma,. Technical Communication: Principles and Practice, 2nd Edition. New Delhi: Oxford University Press.2011.

- 2. Ford A, Ruther. Basic Communication Skills; Pearson Education, NewDelhi.2013.
- 3. Gupta, Ruby. Basic Technical Communication, Cambridge University Press, NewDelhi.2012.
- 4. Kameswari, Y. Successful Career Soft Skills and Business English, BS Publications, Hyderabad.2010.
- 5. Tyagi, Kavita & Padma Misra. Basic Technical Communication, PHI, New Delhi.2011.

Subject Code	ECO108	Subject Title		MICRO	ECONOMICS-I	I			
LTP	5-1-0	Credit	6	Subject Category	UC	Year	1 st	Semester	II

Course Objective:

- To make students understand the competitive, monopolistic, monopolistically competitive, and oligopolistic markets, how they are organized and the outcomes of thesemarkets.
- To give primary emphasis on the nature and functions of product markets, and includes the study of factor markets and the role of government in promoting greater efficiency and equity in the economy.
- To develop the skills and knowledge of advanced microeconomics necessary for a career as an academic economist and in all areas where advanced research skills in economics are required.

UNIT 1: Price andoutput determination

(9Lectures)

Oligopoly-Price and output determination — Non Collusive: Cournot, Kink demand curve and price rigidity, Collusive: Price leadership, Cartels.

UNIT 2: Alternative Theories oftheFirm

(9 Lectures)

Critical evaluation of marginal analysis; Baumal's sales revenue maximization model (simple static with advertisement model); Full-cost pricing rule; Bain's, limit pricing theory.

UNIT 3: Theory ofFactorPricing

(12Lectures)

Market for Factor Inputs: (largely with reference to Labour): A Firms's and Market Demand for a labour (with one and several variable inputs) and its determinations. Supply of labour to a firm and the Market. Equilibrium Wage Rate and Employment under:- Competitive Factor and Product Market, Monopsonistic buyer of Labour and perfect competition in Labour market, Imperfect competition in product market and Trade Union Monopoly, BilateralMonopoly

UNIT 4:GameTheory (12Lectures)

Game Theory and Competitive Strategy – the normal form; dominant and dominated strategiesmixed strategies nash equilibrium extensive form game with perfect information- the game tree.

UNIT 5:WelfareEconomics (12Lectures)

Conditions of Pareto Optimality; Pareto efficiency versus Pareto optimality, Market failure and its causes; Markets with Imperfect competition; consumption and production externalities; public goods. Ways for correctingit.

Learning Outcome

- It will make students understand the intricacies of competitive, monopolistic, monopolistically competitive, and oligopolisticmarkets.
- The students will be able to emphasize on the nature and functions of product markets, and include the study of factor markets and the role of government in promoting greater efficiency and equity in theeconomy.
- The students will be able to enhance the skills and knowledge of advanced microeconomics necessary for a career as an academic economist and in all areas where advanced research skills in economics are required.

Text book [TB]:

- **1.** N. Gregory Mankiw, *Economics: Principles and Applications*, India edition by South Western, a part of Cengage Learning, Cengage Learning India PrivateLimited.
- 2. Ahuja, H.L. (2006): Moden Microeconomics: Theory and Aaplications, Sultan Chand and Co., NewDelhi.

- 1. Sen, A. (1999), Microeconomics: Theory and Applications, Oxford University Press, NewDelhi.
- 2. Varian, H. (2000), Microeconomic Analysis, W.W. Norton, NewYork.
- 3. Karl E. Case and Ray C. Fair, *Principles of Economics*, Pearson Education, Inc.,8th
- 4. edition, 2007.
- 5. C. Snyder and W. Nicholson, Fundamentals of Microeconomics, Cengage (India),2010

Subject Code	ECO109	Subject Title		MACI	RO ECONOMIC	S –II			
LTP	5-1-0	Credit	6	Subject Category	UC	Year	1 st	Semester	II

Course Objective:

- The course is designed to introduce learners to the basic concepts such as Aggregate Demand, Aggregate Supply and Circular Flow of Income, macroeconomic environment and the principles underlying macroeconomic policies and governmentstrategies.
- In this course, the students are also introduced to the long run dynamic issues like growth and technical progress.
- It also provides the insight to the various aggregative concepts used in the previouscourse.

UNIT 1:Keynesian Multiplier

(9Lectures)

Concepts, Relation between Multiplier, MPC and MPS, Comparative Static and Dynamic Process. Working of Multiplier in UDC's. Acceleration Principle and Concept of Super Multiplier.

UNIT 2: Determination of GeneralPricelevel

(9 Lectures)

Classical and Keynesian Theory of Money and Prices, Inflation: Effects of Inflation, Theories of Inflation: Cost Push and Demand Pull Inflation, Phillips Curve Analysis of Inflation and Unemployment.

UNIT 3:ISLM (10 Lectures)

Rate of Interest: Keynesian and IS-LM Theories of Interest rate. Macro Economic Policies: Monetary and Fiscal Policies

UNIT 4 :TradeCycles (12 Lectures)

Meanings, Types, Phases and Theories of Trade Cycles (Hicks and Samuelson), Control of Trade Cycle, Recent Recessions in the World

UNIT 5:EconomicGrowth (12 Lectures)

Meaning and theories. Harrod-Domar Theory and Neo-classical Theories, Solow Swan Model, Ramsey Model, Diamond Samuelson Model

Learning Outcome

- The student will develop a perspective on functioning of theeconomy.
- The Student will develop critical understanding of the policy implications and theoretical models of the Macroeconomy.

Text book [TB]:

- 1. Dewett K.K. &Navalur M.H., Modern Economic Theory, S. Chand &Co Ltd, New Delhi, 2010
- 2. Paul Samuelson and Nordhaus: —Economics|| (18th Ed.) Tata Hill PublishingCompany

- 1. Lipsey R.G. and K.A. Christal)—Principles of Economics|| 9th Ed., Oxford UniversityPresss.
- 2. Branson, W. A. (1989), —Macroeconomics: Theory and Policy||, 3rd ed. Harper and Row, NewYork.
- 3. Shapiro, E (1996), —Macroeconomics: Analysis|| Galgotia Publication, NewDelhi.
- 4. Stiglitz J. E. and Carl E. Walsh (2002), Principles of Macroeconomics, W.W. Norton and Company, NewYork.

Subject Code	ECO116	Subject Title		Math	ematical Meth	ods For E	conon	nics I	
LTP	5-1-0	Credit	6	Subject Category	UC	Year	1 st	Semester	II

Course Objective:

- The Course is developed to transmit the body of basic mathematics that enables the study of economic theory at the undergraduate level, specifically the courses on microeconomic theory, macroeconomic theory, statistics and econometrics set out in thissyllabus.
- In this course, particular economic models are not the ends, but the means for illustrating the method of applying mathematical techniques to economic theory ingeneral.

UNIT 1:BasicConcepts (9 Lectures)

Basic Concepts: Variables and Parameters; Sets; Functions and their graphs; concepts of Limits

UNIT 2: quadraticand simultaneous

(9Lectures)

Equations – simple, quadratic and simultaneous and Identities; Equations of a straight line, concept of slope; Equation and interpretation of Rectangular Hyperbola, Logarithms and exponents.

UNIT 3: ArithmeticandGeometric

(10Lectures)

Series – Arithmetic and Geometric;Rate of growth and its Measurement, Present Value and its Applications. Annuities: value; Simple Differentiation – concept and applications.

UNIT 4:Differentiation (12 Lectures)

Partial and Total differentiation; Homogenous function and Euler's Theorem; Maxima and Minima of Functions of one and two variables; Constrained Optimization Problem (with maximum three variables). Integration of a function; Methods of Substitution and Partial fractions; Integration by parts.

UNIT5:Applications (12 Lectures)

Simple and Direct Applications of the above Concepts in economics: Concept of elasticity; Elasticity of demand; Average and Marginal functions; Interrelationships among total, marginal and average cost and revenues. Optimization problems relating to revenue, cost, profit, utility and production; Consumer's surplus and producer's surplus.

Learning Outcome

- The Student will Understand and use the mathematical in a variety of economic models.
- The student will learn to apply mathematical methods and techniques that are formulated in abstract settings to concrete economicapplications.

Text book [TB]:

1. Sharma.J.K., Business Mathematics, Ane BookIndia.

- 1. Chian, A.C. and K. Wainwright (2005) Fundamental Methods of Mathematical Economics, Fourth Edition.McGraw-Hill.
- 2. Jacques, I. (2009) Mathematics for Economics and Business, 5th Edition, PrenticeHall.
- 3. Wisniewski, M. (2003) Mathematics for Economics, 3rd Edition, PalgraveMacmillan.
- 4. K. Sydsaeter and P. Hammond, *Mathematics for Economic Analysis*, Pearson Educational Asia: Delhi,2002.

Subject Code	ECO148	Subject Title	COMPUTER A	PPLICATIONS II	N ECONO	MIC AI	NALYSIS	
LTP	5-1-0	Credit	6 Subject Category	GE II	Year	1 st	Semester	II

Course Objective:

- To enable students to have an understanding of how computers work and make academic work more efficient.
- Learn basic word processingskills.
- To learn principles of using Excel and SPSS and how to work onit.

UNIT 1: MSword (7 Lectures)

Introduction to Word Processing: Editing, viewing documents in different layouts, page margins, indent, bulleting and numbering, bold face, italics, underline, fonts and fonts size, borders and shading, find and replace, page breaks and page numbers, headers and footers, Printing: What To Do Before Printing? Introduction To 'Page Setup', 'Print Preview' And 'Print, Dialog Box'

UNIT 2: MS-Excel:Excelbasic (7 Lectures)

Introduction about Microsoft Excel at the basic level: overview, tools, creates a spreadsheet, format, spreadsheet, calculations, create charts and printing; Solve problems with Excel: Solve some economics problem on spreadsheet: Introduction about the modelling process on spreadsheet and using Excel tools to solve the problems

UNIT 3:MS-PowerPoint (8 Lectures)

Presentation with PowerPoint: PowerPoint components, What's Slide Master? What's Title Master? Creating a presentation with full components: text, picture, drawing, WordArt, equation, organization chart, chart, table, sound, video clips, Customizing and applying effects for a slide: template design, background color, animation, effects, built-in animation effects, navigation buttons, etc. Printing and exporting a slide

UNIT 4:Graphics (8Lectures)

Uses of computer graphics, classification of applications, software f or computer graphics: Harvard and Stanford Graphics, MS-Excel graphics

UNIT 5: SPSS andE-viewsBasics

(6 Lectures)

Basic components, Start and exit, Window manipulation, Create and save a new work file, Open an existing work file, Select a subset (sample) of observations in the work file, Create new series, Delete a series, Create groups of objects and edit data, Rename, copy and delete objects, Create a new object out of current view (freeze), Printing objects, Import data from Excel file, Create different types of graph of series, Display summary statistics forseries

Learning Outcome

- The student will be able to apply fundamental principles of methods of computer science to a wide range of application.
- The student will get an understanding of using computers as user levels including programming environment.
- The student will be able to apply mathematical and scientific reasoning to a variety of computational problem of economicanalysis.

Text book [TB]:

- 1. V. Rajaraman: Fundamentals of Computers, Prentice Hall (Ind.) NewDelhi.
- 2. Sinha: Computer Fundamentals, BPB Publications, New York.

- 1. Michael Miller: Absolute Beginner's Guide to ComputerBasics
- 2. Michael Miller: Easy Computer Basics, Windows Vista Edition New Perspectives ComputerConcepts by Jamrich Parsons, DanOja
- 3. Microsoft Office Access 2007 on demand by SteveJohnson

Subject	ECO149	Subject		Regional Economics							
Code		Title									
LTP	5-1-0	Credit	6	Subject	GE II	Year	1st	Semester	II		
				Category			_				

Course Objective:

- This subject will be helpful to examine how urban and regional development would focus initially on the economic forces to generate cities and economic ties within aregion.
- It will develop a framework to discuss economic theories on land use, housing, transportation and general sub-national economicdevelopment.

UNIT 1:Introduction (7 Lectures

Concepts – what is region? Types of region; Regional growth; Techniques of regional analysis; Industrial location theory; Regional input-output economics; Identification of key sectors; Multi-stage planning

UNIT 2: Regional and Economic Development

(7 Lectures)

Regional Economic Development; Fundamental Issues of Regional Economics; Business Location and Economic Incentives Market Areas; Economic Structure; Regional Growth and Development Regional Models; Costs and Benefits of EconomicGrowth

UNIT 3: Determinant of Regional Development

(8 Lectures)

Mobility of Resources; Land Use; Housing and Neighborhood development; Local Government Financing

UNIT 4: Rural and Urban Development

(8 Lectures)

Introduction to urban and rural economics: Alternative approaches of geographical economics; comparative advantages and theory of external economies; Localization economies vs urbanization economies; rural and urban growth; Urban and Regional Economic PolicyAnalysis

UNIT 5: Regional DevelopmentandGovernment

(6 Lectures)

The role of the local government in regional development; Market Forces in the Development; rural and Urban Challenges in India; Rural and urban Health; Housing and Public Policy; Local Government Expenditures and Taxes Learning Outcome

- Increase student's consciousness towards regional development and its majordeterminants.
- 2 Students would get significant initiation to increase regionaldevelopment.
- 2 Students would be familiar how regional development would be essential to increase national development.

Text book [TB]:

- 1. Trivedi S. Regional Economic Co-op- and Integration, 2006
- 2. Dholakia, R.H: Regional Disparity in Economic Growth in India, Himalaya Publishing House, Bombay, 2006
- 3. John B. Parr, "Regional Economic Development: An Export Stages Framework," Land Economics, Feb. 1999, pp.94-114.
- 4. Chand, M. and U.K. Puri: Regional Planning in India, Allied Publishers, New Delhi, 2016

- 1. Hanumantha Rao, CH: Regional Disparities and Development in India, Ashish Publishing House, New Delhi.2006
- 2. Glasson, J: An Introduction to Regional Planning, Concepts, Theory and Practice, Hutchiuson, London.
- 3. Harry N Richardson (1969): regional Economics, Weidenfield and Nicolson, Prager, New York London.

Subject Code	CH201	Subject Title			ENVIRONMEN	ITAL SCIEI	NCE		
LTP	2-0-0	Credit	2	Subject Category	AEC	Year	1 st	Semester	II

OBJECTIVE

To impart basic knowledge about the environment and its allied problems and to develop an attitude of concern for the environment. Further the course structure will create the awareness about environmental problems among students and motivate the students to participate in environment protection and environment improvement programs. The course aims to develop skills to help the concerned individuals in identifying and solving environmental problems.

Unit 1: Basics of Environment and Natural Resources:

04 Hrs

Definition and Concept of Environment, Multidisciplinary nature of environmental studies. Scope and importance of environmental studies, Need for public awareness, Environmental concerns and people. Introduction and classification of natural resources. Energy Resources, Water Resources, Land Resources, Forest Resources, Food Resources, Mineral Resources, Case studies related to over exploitation of resources and their impacts. Role of an individual in conservation of natural resources, Sustainable lifestyles.

Unit 2: Ecosystems: 04 Hrs

Definition and concept of ecology, Structure and Function of an Ecosystem, Energy Flow in Ecosystems, Biogeochemical cycles (Nitrogen, Carbon, Phosphorus, Oxygen, Hydrological). Species interactions in ecosystems. Ecological succession and ecological pyramids. Characteristic features of grassland, pond, desert and forest ecosystems. Ecosystem services and conservation.

Unit 3: Biodiversity and its conservation:

04 Hrs

Introduction and types of biodiversity. Bio-geographic classification of India, Value and significance of biodiversity, Biodiversity at global, national and local levels, India: A mega-diversity nation, Biodiversity hotspots, Threats to Biodiversity: Poaching and man-wildlife conflicts, IUCN Red Data Book and endangered & endemic species of India. Biodiversity conservation strategies, Institutes and organizations.

Unit-4 Environmental Pollutions:

05 Hrs

Introduction and Definition. Causes, consequences and control measures of: Air pollution, Water pollution, Noise pollution, Nuclear pollution, Soil pollution, Thermal and Marine pollution. Solid waste management, Bio-medical waste management. Disasters and its mitigation strategies, Global warming, Climate change, Acid rain, Ozone depletion and Smog. Pollution case studies. Role of an individual in pollution prevention.

Unit-5 Social Issues and Environment:

04 Hrs

Sustainable Development: Concept and importance, Environmental Impact Assessment (EIA), GIS, Remote sensing. Water conservation and rain water harvesting. Resettlement and rehabilitation problems, Environmental audit, ecolabeling and eco-friendly business. Environmental Legislation in India, Population explosion and its impact on environment and human health, Value Education and environmental ethics.

Field work: 03 Hrs

- Visit to a local area to document environmental asset: river/forest/grassland/hill/mountain
- Visit to a local polluted site-Urban/Rural/Industrial/Agricultural
- Study of common flora and fauna.
- Study of a common ecosystem-pond, river, hill slopes, etc.

Course Outcome:

At the end of the course, the student will be able to:

- CO1. Demonstrate depleting nature of Environmental Resources and Ecosystem concepts.
- CO2. Able to identify the structure and functioning of natural ecosystems.
- CO3. Establish man-wildlife harmonious relationship.
- CO4. Adapt to 3R (Reuse, Recovery, Recycle). Identify the causes and control measures related to Pollutions.
- CO 5. Illustrate and analyse various Case Studies related to Environmental issues and Env. Legislation.

Subject	ECO206	Subject	D	EVELOPMENT	ECONOM	ICS – I						
Code		Title										
LTP	5 -1 -0	Credit	6 Subject	UC	Year	2 nd	Semester	Ш				
			Category									

Course Objective:

- The study of the course Development Economics will addresses the development issues for poor countries
- The course aims at explaining the causes and effects of poverty and deriving policyimplications.
- The course is based on theoretical economics, adapted to reflect the special institutional structures that characterize most developing countries.

UNIT 1: Basic Concepts of Economic Development

(12 Lectures)

Economic Growth and Development, Determinants and Measurment indicators (PQLI and HDI) of economic development: Sustainable economic development. Concept of Underdevelopment and basic characteristics

UNIT 2: Theories of Economic Development

(10Lectures)

Adam Smith, Karl Marx and Schumpeter

UNIT 3: PovertyAndInequality

(12 Lectures)

Definitions measures and mechanism, Inequality Axioms; A Comaparison of Commonly used Inequality Measures, Connection Between Inequality And Development; Poverty Measurement.

UNIT 4: Development ApproachestoDevelopment

(8 Lectures)

Vicious Circle of Poverty, Lewis dual economy model, lebenstein critical minimum effort theory, Balanced vs. unbalanced growth theories, The Harrod-Domar model, the Solow model and its variants.

UNIT 5: Economic Planning and Policy

(10 Lectures)

Development planning: rationale, Strategies and objectives of planning, Role of state and Capital formation in economicdevelopment

Learning Outcome

- The students will be able to understand the magnitude of the differences in incomes between countries and peoples of the world
- The students will get the knowledge of a variety of theoretical models and mechanisms and arguments that are relevant for development and povertyissues.
- The students will be able to do empirical research relevant for development and povertyissues.
- The Students will get the understanding of the nature and meaning of economic development or underdevelopment, both in general, and as applied to people in specific developing countries.

Amended by the BoS and approved by the Academic Council at its 9th Meeting held on 14.04.2018

Subject	ECO207	Subject		S	tatistics For Ec	onomic A	nalysi	s-l	
Code		Title							
LTP	5 -1 -0	Credit	6	Subject	UC	Year	₂ nd	Semester	III
				Category			_		

Course Objective:

- The Course provides understanding of basic concepts and terminology that are fundamental to statistical analysis and inference.
- To enable the students about the application of statistical tools and to understand the assumptions underlying those statisticaltools.

UNIT 1: Data Presentation & Central Tendency

(12Lectures)

Collection, Classification and Presentation of statistical data, Measures of Central Tendency: A.M., G.M., H.M., Median, Quartiles, Deciles, Percentiles, Mode

UNIT 2: Descriptive Statistics for Univariate Data

(10 Lectures)

Measures of dispersion: range, inter-quartile range, quartile deviation, mean deviation, variance, standard deviation, Lorenz curve, skewness and Kurtosis, moments

UNIT 3:Indexnumbers (12 Lectures)

Problems and methods of construction of various types of indices, Laspeyres, Pasche's and Fisher's ideal index numbers, Time reversal, factor reversal and circular tests. Time series Analysis: Components and Measurements

UNIT 4: Descriptive Analysis ofBivariateAnalysis

(8 Lectures)

Definition of Bivariate data, scatter diagram, covariance - measure of association - Coefficient of Simple Correlation, Properties and the method of calculation. Concept of rank correlation - Spearman's Rank Correlation

UNIT 5: SimpleLinearRegression

(10 Lectures)

Measure of influence - Simple Linear Regression - Least Squares and Normal Equations and determination of regression coefficient, Difference between the correlation approach and the regression approach.

Learning Outcome

- The students will develop Quantitative reasoning skills and understand how to use empirical evidence to evaluate the validity of an economic argument, use statistical methodology, interpret statistical results and conduct appropriate statistical analysis ofdata.
- 2 Students should be able to interpret and apply basic statistical methods and understand empirical papers of an appropriatelevel.

Text book [TB]:

- 3. Karmal P.H. and Polasek M. —Applied Statistics for Economists (4th edition), Pitman, Australia.
- 4. Goon. Gupta, Dasgupta: Basic Statistics, World Press Private Limited Nagar and Das: Basic Statistics

Subject Code	ECO208	Subject Title		Math	nematical Meth	ods For I	conor	nics – II	
LTP	5-1 -0	Credit	6	Subject Category	UC	Year	2 nd	Semester	III

Course Objective:

- To acquire knowledge of economic and mathematical concepts, theories and methods and to demonstrate competency in using this information to analyze economic events, understand the workings of economic institutions and to evaluate economic policies.
- This course focuses on the mathematical methods and models that are required to understand current economics and to investigate economicmodels.

UNIT 1: Matrices and Determinants

(12Lectures)

Types; Transpose, trace, adjoint and Inverse of matrices, Solution of a system of two and three equations by Matrix Inverse and Cramer's methods, Linear independence and Linear dependence of vectors; Rank of a matrix; Simple Application questions. Application in Input-Output analysis.

UNIT 2:DifferentialEquation

(10Lectures)

Introduction; Solution: Variable separable case, Homogeneous case, Standard linear differential equation, Bernoulli's form, Exact equation; Solution of linear differential equation with constant coefficients; Simple Application questions.

UNIT 3: Functions of severalrealvariables

(9 Lectures)

Geometric representation; graphs and level curves, Differ second order derivatives; properties and application, the implicit funaction theorem and application to comparative staticsproblems.

UNIT 4: MultiVariableOptimization

(11 Lectures)

Convex sets; Geometric Properties of Function, Convex Function And Their Characterization Properties And Applications; Quasi. Convex Function And Their Characterization Properties And Application of unconstrained optimization: Geometric characterization, characterizations using Calculus and applications.

UNIT 5:GameTheory (10 Lectures)

Categories of games, normal form and extensive form presentation Nash equilibrium and Refinements: Dominant strategy Nash equilibrium, Rationalizable strategy, Equilibrium in Oligopoly. Sequential games, Repeated games, Introduction to Co-operative Games

Learning Outcome

- The students should be able to acquire and demonstrate analytical and critical thinking skills and to apply and interpret quantitative, qualitative and graphical information in a problem-solving context.
- The students will develop the skills necessary to communicate effectively in writing and orally about economic and mathematicalissues
- The students will develop numerical examples and algebraic models to illustrate a variety of theoretical economic result.

Text book [TB]:

Subject Code	ECO246	Subject Title		Beha	vioral Econom	ics			
LTP	5-1-0	Credit	6	Subject Category	GE III	Year	2 nd	Semester	III

Course Objective:

- 2 To provide students with an understanding of the principles of human behaviour in organizations with relevance to the Indian businesscontext.
- To provide that how an individual economic agent can contribute in economicactivities.

UNIT 1:Introduction (12Lectures)

Definition of Behavioral Economics? Behavioral Economics and the Standard Economic Models (The Neoclassical Repairshop); Evaluating Economic Theories; History and Evolution: the Neoclassical Approach.

UNIT 2:DecisionTheory (12 Lectures)

Expected Utility Theory; Classical Anomalies; Prospect Theory; Probability Judgments

UNIT 3: BehavioralGameTheory (12 Lectures)

Game Theory Concepts; Player Bargaining; Rationality & Strategic Interaction

UNIT 4: Social Preferences & LaborEconomics (12 Lectures)

Evidence of Social Behavior; Models of Fairness and Reciprocity; Behavioral of labor

UNIT 5: Social Activities and Behavioral Economics

(12 Lectures)

Social preferences: fairness, reciprocity, social signaling; Intertemporal choice, self-control. Imperfect memory; Incentives, motivation; Attitude to information. Beliefs as an argument of utilityfunctions

Learning Outcome

- To increase familiarity of students towards BehavioralEconomics.
- Students would be in position to take economic decision at individuallevel.
- Develop an understanding of the philosophy and the principles underlying the field of behavioral economics.

Text book [TB]:

- 1. Richard H. Thaler. Misbehaving-Making of Behavioral Economics. WW Norton & Company, 2015

- 4. Bernheim D. (1994) "A Theory of Conformity", Journal of Political Economy, 102:842-877.

Subject Code	ECO247	Subject Title		Indian Eco	onomy-II			
LTP	5 -1- 0	Credit	6 Subject Category	GE III	Year	2 nd	Semester	III

Course Objective:

- To enable students to have an understanding of the various issues/components of the Indian economy so that they are able to comprehend and critically appraise current Indian economics problems.
- This course will explore a set of inter related issues relating to the growth and development of the Indian Economy.
- 2 Application of Economic Theory in the context of India's Economic Growth and Development.
- To enumerate the fundamentals of Indian economy, business andindustry.
- To study the present status of Indian Economics and to get a glimpse of futurechallenges.

UNIT 1: Impact of colonial rule on certain areas in theIndianeconomy

(12 Lectures)

Indian Agriculture from Cornwallis to commercialization, The state of industrial development in mid- nineteenth century India, The de-industrialization, Emergence of modern capitalist industrial enterprise in India

UNIT 2: Foreign capital in Colonial India – its extentandimpact

(15 Lectures)

Foreign-trade-growth and composition; guided under-development' of India under the British rule; development' of India under the British rule; evolution of provincial finance, the nature and problem of public debt; Economic drain from India -form, extent and consequences.

UNIT 3: Indian Agriculture; Major Issues AndtheirImpact

(12 Lectures)

Land reforms; Tenancy of different kinds and their effects, Marketable surplus, Green Revolution in India, Minimum agriculture prices and Public Distributionsystem

UNIT 4: Indian Industries: Issues andtheirimpact

(8 Lectures)

Industrial licensing – justification and problems, Industrial stagnation and Crisis of Indian Economy, New industrial Policy and changing Indian state in the era ofglobalization.

UNIT 5:Internationaltrade (10 Lectures)

Foreign trade policy, special Economic zones, foreign investment inflows since 1991-FII, FDI Recent changes in exchange rate policy,

Learning Outcome

- Application of Economic Theory in the context ofIndia
- Exposure to Indian EconomicData
- Critical Review of ResearchPapers
- The students will be able to understand various issues related to economic condition of India.
- To analyze the economic development of India analyze the various policies / programmes run by the government for improving the economiccondition.

Text book [TB]:

- 3. A Panagariya: India the emerging Gaint, Oxford UniversityPress.
- 4. S. K. Mishra and V.K Puri: Indian Economy Its Development Experience. Himalaya Publishing Houses, Mumbai.

Subject Code	ECO248	Subject Title	Industrial Economics	·II				
LTP	5- 1-0	Credit	6 Subject Category	GE III	Year	2 nd	Semester	III

Course Objective:

This course intends to provide knowledge to the students on the basic issues such as productivity, efficiency, capacity utilization and debates involved in the industrial development inIndia.

UNIT 1: Basic concepts inGameTheory

(12 Lectures)

Basic concepts in Game Theory; Technology, Production Cost and Demand; Perfect Competition, Monopoly and Monopolistic Competition; Foundations of Oligopoly Theory; Markets for Homogeneous Products; Markets for Differentiated Products; Concentration.

UNIT 2: InvestmentandPricing

(15Lectures)

Investment in Entry Deterrence; Pricing Tactics: Discriminatory Pricing; Marketing Tactics: Bundling, Upgrading and Dealership; Quality, Durability and Warranties.

UNIT3:Advertising (12Lectures)

Advertising; Collusion and Cartels; Market Structure, Entry and Exit; Vertical Restraints; Research and Development.

UNIT 4:Market Performance

(8Lectures)

Empirical Studies on Structure- Conduct-Performance Relationship; Empirical Studies on Market Performance; Management, Compensation and Regulation.

UNIT 5: Globalization and Indian industry

(12 Lectures)

Globalization and Indian industry; International competitiveness of Indian industry; Privatization and issues relating to disinvestment policy; Industrial structure at the time of Independence; Industrial policy (Role of state); New industrial policy and economic reforms; Industrial growth and pattern; Structure of industrial labour; Employment dimensions of Indian industry; Industrial legislation; Industrial relations; Exit policy and social security; Wages and problems ofbonus

Learning Outcome

- 2 It would increase familiarity of students towards industrialeconomics.
- It would also increase the student's awareness towards industrialeconomics.

Text book [TB]:

- 1. RR Barthwal. Industrial Economics: An Introductory Text Book. Book Age Publications, 2013
- 2. Ranjana Seth. Industrial Economics. Ane Books Pvt. Ltd,2010
- 3. Rajan Mishra. Industrial Economics and Management Principles. Lami Publications (P)Ldt., 2008.

Reference books [RB]:

1. Oz Shy. Industrial Organization- Theory & Applications. MIT Press, 2016

Subject	ECO209	Subject	Application of Statis	Application of Statistical Software in Economic Analysis							
Code		Title									
LTP	2 -0- 0	Credit	2 Subject	SEC I	Year	2 nd	Semester	Ш			
			Category								

Course Objective:

- It would emphasis on the concepts and application of probability theory, random variables, and distributions, sampling theory, statistical inference, correlation andregression.
- 2 Statistical inference techniques such as estimation and significance testing are important in the fitting and interpretation of econometric models.
- Correlation and regression analysis are essential tools for measuring relationships between variablesand forprediction.

UNIT 1:ModelSpecification

(6 Lectures)

Data classification, role of data in modeling, exploratory data analysis (EDA) vs. formal statistical inference (FIS), different dimensions of data – social, time, spatial etc.

Modeling average: working with real world dataset (usefulness and shortcomings of modeling mean, relative efficiency of mean and median, confidence interval and its interpretation, etc.)

UNIT 2:SimpleModel (5 Lectures)

Basic principles and discussion on theoretical background; Regression with graphics – checking the model assumption, exploratory band regression, checking of high leverage & influential points, transformation of data towards linearity, double-log transformation vs. semi-log transformation, etc. Hierarchical sequence of simple regression, introduction of added variable plot, etc.

UNIT 3: Macro LevelDataSet

(5 Lectures)

Working with different macroeconomic data set, money illusion in the demand function, partial vs. multiple regressions, decomposing the sum of squares across regression, coefficient of determination, partial regression vs. partial coefficients, checking the assumptions of regression model, etc.

UNIT 4: Regression oncategoricalvariable

(5 Lectures)

Handling different data sets where dependent variable is categorical, preparation, distributional and contingency tables, test of association, Logit and Probit modeling, comparing logit with linear probability model.

Learning Outcome

At the end of this course the students-

- Handle real data withconfidence
- Apply econometric methods of analysis to newcircumstances
- Understand the conditions under which particular estimators are appropriate
- Apply the theoretical methods to numerical data
- Write and present technical materiallucidly
- Understand the basic theory of the ordinary least squares, generalized least squares and panel data models

Text book [TB]:

Subject	ECO216	Subject		D	evelopment Ec	onomics	– II		
Code		Title							
LTP	5-1-0	Credit	6	Subject	UC	Year	₂ nd	Semester	IV
			(Category			_		

Course Objective:

- The course will examine some of the major economic issues faced by individuals and governments in poorer countries, and introduce students to the field of developmenteconomics.
- The course will study the concepts and measurement of development, poverty and growth, and how economists use theory, empirical analysis and experiments to address issues in these areas.
- The course will help to survey the Topics: poverty and inequality, population growth, agriculture and rural development, investments in education and health and the role of women, governance and institutions, credit and insurance, foreign investment and aid, and international tradepolicy.

UNIT 1:DualisticDevelopment

(12 Lectures)

Social and Technological dualism, Nurkse disguised unemployment as saving potential, Fei Ranis Theory of Dual Economy, Haris Todaro Modal of Migration.

UNIT 2: ModelsofGrowth (10 Lectures)

Classical model: Mill Theory, Marxian model; Keynesian model

UNIT 3: InequalityandDevelopment

(12 Lectures)

Meaning, Measurement Lorenz Curve, Kuznets Inverted U Shape curve, Inequality and Development:- Inter connection, Population Growth and EconomicDevelopment.

UNIT 4:Capitalformation

(8 Lectures)

Meaning and sources, Capital output ratio; Human capital: concept and utilization, Foreign aid and Economic Development, Transfer of technology.

UNIT 5: LabourandUnemployment

(10 Lectures)

Disguised unemployment; Characterization and policy implications (Sen's Model); Economics of child labour: Empirical context, Basu-Van model of multiple equilibria with altruism, policy issues, Efficiency wage theory as explanation for wage rigidity and involuntary unemployment: A basic model

Learning Outcome

- The student will be able to describe the nature and meaning of economic development or underdevelopment, both in general, and as applied to people in specific developing countries
- The course enables the students to illustrate how economics can be used to create or analyze alternative approaches to promote development
- The student will be able to explain the major development problems, choices and opportunities currently faced by developing countries
- The student will learn to select, assess and justify specific policy choices that developing countries might make to achieve their economic and socialobjectives.
- The students will develop skills to Analyze, synthesize and evaluate information drawn from the available data and appropriate theoretical tools, and to express their ideas orally and inwriting.

Subject Code	ECO217	Subject Title	Sta	tistical Method	ds for Eco	nomic	s II	
LTP	5-1-0	Credit	6 Subject Category	UC	Year	2 nd	Semester	IV

Course Objective:

- The course introduce basic concepts and terminology that are fundamental to statistical analysis and inference.
- To provide an understanding of the importance of sampling techniques, data collection, interpretation, and evaluation.
- To develop an understanding of descriptive and inferential statistics and apply this understanding to economic and businessphenomenon

UNIT 1: IntroductionandOverview

(13 Lectures)

The distinction between populations and samples and between population parameters and sample statistics; the use of measures of location and variation to describe and summarize data; population moments and their sample counterparts.

UNIT 2: ElementaryProbabilityTheory

(13 Lectures)

Sample spaces and events; probability axioms and properties; counting techniques; conditional probability and Bayes' rule;independence.

UNIT 3: Random Variables and Probability Distributions

(13 Lectures)

Defining random variables; probability distributions; expected values of random variables and of functions of random variables; properties of commonly used discrete and continuous distributions (uniform, binomial, normal, Poisson and exponential randomvariables).

UNIT 4: Random Sampling and Jointly DistributedRandomVariables

(13 Lectures)

Density and distribution functions for jointly distributed random variables; computing expected values; covariance and correlation coefficients.

UNIT 5: Sampling, Point and Interval Estimation

(13 Lectures)

Principal steps in a sample survey; methods of sampling; the role of sampling theory; properties of random samples. Estimation of population parameters using methods of moments and maximum likelihood procedures; properties of estimators; confidence intervals for population parameters.

Learning Outcome

At the end of this course the students-

- 2 CO 1 Handle real data withconfidence
- CO 1 Apply econometric methods of analysis to newcircumstances
- 2 CO 3 Understand the conditions under which particular estimators areappropriate
- 2 CO 4 Apply the theoretical methods to numerical data
- CO 5 Write and present technical materiallucidly
- 2 CO 6 Understand the basic theory of the ordinary least squares, generalized least squares and panel datamodels

- 2. Spiegel, Murry R —Theory and problems of Statistics|| (Schaum's outline series, McGrawHill, 1992)

Course Structure & Syllabus of B.A. (Hons.)- Economics

Applicable for Batch: 2018-2021

Subject Code	HS446	Subject Title		Industria	l Psycholo	ogy		
LTP	2 -0 -0	Credit	2 Subject Category	SEC II	Year	2 nd	Semester	IV

Course Objective:

- Reform of WorkingConditions
- Humanistic Approach inIndustry
- Creating ProperLeadership

UNIT 1: INTRODUCTION TOINDUSTRIALPSYCHOLOGY

(3Lectures)

Definitions, History & Scope of Industrial Psychology, Major influences on Industrial Psychology, Classical Approaches (Scientific Management), Neo-Classical Approaches (Hawthorne Experiments)

UNIT 2: INDIVIDUAL BEHAVIORATWORKPLACE

(7Lectures)

Emotional Quotient, Job related attitude: Job Satisfaction; Satisfaction with regards to pay and supervision, Measuring Job Satisfaction: Job Descriptive Index, Minnesota Satisfaction Questionnaire, Motivation & Theories: Need Theories (Maslow McClelland and Herzberg). Cognitive Theories (Goal Setting Theory, Self-Efficacy Theory).

UNIT 3: WORKENVIRONMENT

(4 Lectures)

Organizational Culture- Meaning and Types, Influence of Organizational Culture on Employees, Leadership-Nature, Style and Approaches to Leadership, Group dynamics & Change Management

UNIT 4:PERFORMANCEMANAGEMENT

(4 Lectures)

Job Analysis and Learning, Training and Development- Objectives and Needs, Training Process, Methods of Training, Tools and Aids, Evaluation of Training Programs, Methods of Performance Appraisal

UNIT 5: STRESS ANDCONFLICTMANAGEMENT

(7Lectures)

Stress Management- Meaning, Causes, & Types, Work and Mental Health: Fatigue, Boredom, Accidents and Safety. Everyday Stress and its management-Refuting Irrational Ideas, Rational Emotive Behavioral Therapy, Goal Setting and Time Management, Conflict: Definition, Traditional Vs. Modern view of conflict, Types of Conflict – Intra personnel, Interpersonal, Organizational, Constructive and Destructive Conflict, Conflict Management

Learning Outcome

- Creating motivatedworkers
- Creating a conducive environment atworkplace

Subject Code	ECO249	Subject Title		(Contemporary	Economi	c Issues	;	
LTP	5 -1- 0	Credit	6	Subject Category	GE IV	Year	2 nd	Semester	IV

Course Objective:

This course considers an array of leading contemporary economic problems, with specific topics chosen from current and recent policy debates inIndia.

UNIT 1: Political Alternatives and theIndian Polity

(13 Lectures)

The Communist Challenges: Maoists and the Left Front; The Socialist Challenges: J.P. Movement and Total Revolution; The Feminist Challenges: Discourses and Ideologies of Women's Movement; Environmental Movements in India; Emergence and Transformation of the 'Dalit' in Indian Politics; Mandal and the Hindutva Challenge; The Politics of Secularism and Communalism

UNIT 2: ContemporaryIndianEconomy

(13 Lectures)

The nature of the colonial Legacy; Debates in the formative years, the Bombay Plan; Structure of the Indian economy at independence; Economic policies and the role of the state after Independence; Agrarian Policy, Land Reforms and Green Revolution; Industrial and Social SectorPolicies

UNIT 3: Indian Economy in aGlobalEra

(13 Lectures)

Rise of financial and service sectors; Global multilateral agencies and domestic economic policies; Shrinking of social welfare policies of the state; Agrarian distress and itsimpact

UNIT 4: Contemporary Indian Society and Economic Development

(13 Lectures)

Defining the boundaries of the social and cultural realms; Status of different social groups; Folk, oral traditions and local knowledge systems; Caste, Class and Community; Social ReformMovements

UNIT 5: Theories ofIndianSociety

(13Lectures)

Principles of Welfare State and Society; Concept of Secularism and Composite Culture; Debates on Integration, Assimilation and Isolation; Cultural Pluralism and Cultural Nationalism; Debate on the nature of Tribal and Dalit identity inIndia

Learning Outcome

- To increase student's consciousness on historical perspectives of various issues and howthese issues can be resolved through economic and social development inIndia.
- 2 Enable to student to accept as a critical challenge to solve contemporary economic issues inIndia

Text book[TB]:

Subject Code	ECO256	Subject Title	Introduction to Research Methods							
LTP	5 -1- 0	Credit	6 Subject Category	GE IV	Year	2 nd	Semester	IV		

Course Objective:

- To enable the students to have a strong idea on various techniques to analysis the primary and secondarydata.
- To increase the understanding of students to undertake the research on various aspect of economic and socialissues.
- The course also will also focus on how various research methods can be used to assess the impact of various socio-economic indicators in aneconomy.
- It would be helpful for students to write a review and scientific researcharticles.
- To enable the students demonstrate an awareness of their role in research anddevelopment.

UNIT 1: Introductiontoresearch

(13Lectures)

Foundations- language, philosophy, conceptualization and evaluation of research

UNIT 2:Sampling (13Lectures)

Sampling-probability and non-probability sampling; Measurement- construct validity and reliability; Survey research-types of surveys and interviews; Scaling-Thurston, Likert and Guttman scaling

UNIT 3: Measures for dataanalysis I

(13Lectures)

Qualitative Measures- data, approaches and validity, Design- Experimental and quasi-experimental, Quantitative Measures: Correlation and regression analysis (two variables and several variables)

UNIT 4: Measures for dataanalysis II

(13Lectures)

Analysis- data preparation, descriptive statistics, hypothesis testing, multivariate analysis (inferential statistics)

UNIT 5: ResearchProposalwriting

(13Lectures)

Writing: research proposal; review article; scientific research article; technical report

Learning Outcome

At the end of this course the students-

- 2 CO 1 The students will be able to acquire a strong research background and knowledge of researchmethodology.
- 2 CO2 The students will have an exposure to analysis the various types ofdata.
- 2 CO3 The students will be able to understand how primary data can be collected at household's level.
- © CO 4 The students will be familiar to write a scientific report and scientific researcharticles.

Subject Code	ECO306	Subject Title	International Economics						
LTP	510	Credit		Subject Category	UC	Year	3 rd	Semester	V

Course Objective:

- To enable the students to have a strong business background and knowledge of international relations, with which they can expect to succeed in the international world ofbusiness.
- To give an exposure to the students that how countries specialize in certain goods and services for comparative advantage over other countries and how this changes overtime.

UNIT 1: Introduction toInternationalEconomics

(13 Lecture)

Trade theories and commercial policy: Theories of absolute advantage, comparative advantage and opportunity cost: Hecksher-Ohlin theory of trade-its main features, assumptions and limitations

UNIT 2: Balance of Trade and Balance of Payments and Exchange Rate

(13 Lecture)

Concepts and components of balance of trade and balance of payments, Equilibrium and disequilibrium in balance of payments, Various measures to correct deficit in the balance of payment Meaning, concept of equilibrium exchange rate and determination: Fixed versus flexible exchange rates: Managed floating exchangerate

UNIT 3: International Monetary System and International Institutions

(13 Lecture)

Bretton-wood systems and its breakdown, International liquidity Special drawing rights, IMF, World Bank, Asian DevelopmentBank

UNIT 4: Rationale of Protection

(13Lecture)

Tariff and non-tariff barriers to trade (Quota, voluntary export restraints, export subsidies, dumping and international cartel)

Unit 5: Economic Co-operation and RoleofWTO

(13 Lectures)

Economic Co-operation: Forms of Economic Co-operation, Static and Dynamic Effects of Custom Union (Viner, Lipsey) and Free trade Area, World Trade Organization: WTO and India, Recent change in the direction and composition of India's foreign trade. Multi-National Corporation: Working and regulations of MNC's in India, Export Promotion and Import Substitution, and Recent import and exportpolicies.

Learning Outcome

- The students will be able to acquire a strong business background and knowledge of international relations, with which they can expect to succeed in the international world ofbusiness.
- The students will have an exposure to, how countries specialize in certain goods and services for comparative advantage over other countries and how this changes overtime

Subject Code	ECO307	Subject Title	Econometrics						
LTP	5 1 0	Credit	6	Subject Category	UC	Year	3 rd	Semester	V

Course Objective:

- The course emphasizes the techniques for basic empirical research, interpretation of quantitative results and modelevaluations.
- To develop the critical insight to appraise econometric results obtained by otherresearchers

UNIT1:Introduction (13Lecture)

Definition, Scope, and Methodology of econometrics; Nature and sources of data for econometric analysis- Time Series, Cross-sectional and Panel Data; Specification of an econometric model Simple Regression Models: Estimators (OLS) and their properties; Statistical inference; Tests of significance and tests of restrictions

UNIT 2:EconometricProblems

(13 Lecture)

Nature, consequences, detection and remedial measures of the problems of multicollinearity, hetroscedasticity and autocorrelation

UNIT 3: Test Procedures and Model Selection

(13 Lecture)

Tests of specification and mis-specification, measurement errors, encompassing models, and criteria for modelselection

UNIT 4: DynamicModels

(13Lecture)

Lags in econometrics, Distributed and autoregressive lags, Koyck model, ARDL and ECM estimation

Unit 5: SimultaneousEquationModels

(13 Lectures)

Introduction, Identification problem, Simultaneous equation bias and 2SLS and 3SLS methods of estimation. Fixed effects model, Random effectsmodel

Learning Outcome

- The students will have developed the necessary skills in developing and interpreting models as applied to a variety of economic problems and and and an applied to a variety of economic problems and applied to a variety of economic problems are applied to a variety of economic problems and applied to a variety of economic problems and applied
- The students will develop skills to use econometric software in an effective manner.

Subject	ECO346	Subject			Agricultur	alEconon	nics				
Code	EC0340	Title									
LTP	510	Credit	6	Subject	DSE I	Year	3rd	Semester	V		
				Category							

Course Objective:

- ☑ To understand the knowledge of nature and scope of agriculturaleconomics.
- To enable the students to have different theories related to agricultural economics

UNIT 1: Role of Agriculture in Economic Development

(13 Lecture) Nature

and scope of agriculture economics; Role of agriculture in economic development; Linkage between agriculture and industry; Theories of agriculture development: Schultz, Mellor and Boserup; Fei- Renis model of agriculturedevelopment

UNIT 2: Economics of Agricultural Production, CostandPrice

(13 Lecture)

Resource use and efficiency in agriculture- Production function analysis- Factor combination and resource substitution; Cost and supply curves; Size of farm and laws of returns; Theoretical and empirical findings; Farm budgeting approach, Agricultural Price Policy; Agricultural markets and marketing efficiency – Marketing functions and costs. Market structure and imperfections; Regulated markets; Marketed and marketable surplus

UNIT 3: Indian Government PolicyonAgriculture

(13Lecture)

Role of agriculture in Indian economy; Regional variations in agriculture production and productivity in India; Agriculture credit and marketing policy in India; Crop insurance policy; Second green revolution, Issues and problems in rural industrialization and development of agro- based industries. Risk and uncertainty in agriculture – crop insurance and marketing policies – role of the state

UNIT 4: Recent Trends inIndianAgriculture

(13Lecture)

Recent trends in agricultural growth in India. Inter – regional variations in growth of output and productivity; cropping pattern shifts; supply of inputs –irrigation, power, seed and fertilizers. Bio – technological practices and growth potential.

Unit 5: Political Economy ofIndian Agriculture

(13 Lectures)

Political Economy of Indian Agriculture: Modes of production – Market interlocking and forced commerce – Methods of surplus extraction – State, community and household, Foreign Capital and Indian agriculture – Multinationals and international institutions. Issues relating to globalization of agricultural trade –WTO-AAO.

LearningOutcome

- The students will have an exposure to different theories which have connection with agriculturaldevelopment.
- The students will demonstrate an awareness of production, cost and price of agricultural development.

Text book [TB]:

Subject Code	ECO347	Subject Title		Hi	story of I	conomic	Thought		
LTP	5 1 0	Credit	6	Subject Category	DSE I	Year	2019-20	Semester	V

Course Objective:

- The study of the course history of economic thoughts will create the understanding that the development of economic theory is the progress of ideas anddebates.
- The course aims at explaining historical beginnings of economic theories, doctrines and postulates

UNIT 1: Mercantilism toNeoclassicalOrthodoxy

(13 Lecture)

Mercantilism; Laissez Faire: Quesnay and the Physiocrats; Adam Smith: invisible hand – accumulation and income distribution –value – market and competition – institutions; J S Mill: Synthesis of classical economics – Ricardo – Capital – wages; Neo classical orthodoxy: AlfredMarshall

UNIT 2: Economic Theory relatingto Marx

(13 Lecture) Marx:

Marxian economic theory: Exploitation and value – wages – trade cycle – capitalist movement – monetary aspects ofcrisis

UNIT 3: Marginalist Revolution and Equilibrium andMarketForms

(13 Lecture)

Marginalist revolution: Neoclassical theoretical system and general economic equilibrium. High Theory: J M Keynes: the general theory; J A Schumpeter: equilibrium and development – trade cycle and money; Market forms: Sraffa – Chamberlin – Joan Robinson: contribution to the study of marketforms.

UNIT 4: IndianEconomicThinker

(13Lecture)

Mahatama Gandhi, Pandit Nehru, Dada Bhai Naroji, BR Amebdkar, Vimal Jalan, Manmohan Singh, Amartya Sen

Unit 5:ContemporaryDevelopments

(13 Lectures)

Contemporary developments: neoclassical synthesis in the age of stagflation: Samuelson – monetarist counter revolution: Milton Friedman – post Keynesian approach – New Keynesian Macroeconomics; New Welfare Economics and Economic Theories of Justice: fundamentals of welfare economics; Social Choice: Arrow; Theories of Justice and self-determination: Rawls and KennethArrow.

Learning Outcome

- The course helps to acquire a comprehension of the evolution of economic ideas tracing to its philosophicalroots.
- The students will get the knowledge of a variety of theoretical models and mechanisms and arguments about various schools of thought relating to economicideas..

Text book [TB]:

1. Screpanti, Ernesto and Zamagni, Stefano (2006). An Outline of the History of Economic Thought (1st ed.). Oxford UniversityPress.

Reference books [RB]:

1. Gide Charles and Rist Charles (2007). A History of Economic Doctrines. Surject Publications.

Subject Code	ECO348	Subject Title	Fina	ancial Economic	cs				
LTP	510	Credit	6	Subject Category	DSE II	Year	3 rd	Semester	V

Course Objective:

- To increase the understanding of students on financial activities in era ofglobalization.
- To explore the role of finance in economic growth and development.

UNIT 1: Money and Capital Market

(13 Lecture)

Indian Money Market: Meaning, Nature: Functions and Constituents of Indian Money Market - Money Market Instruments - Call Money-Treasury Bills - Certificates Of Deposits - Commercial Bills - Commercial Paper-Collateralized Borrowing and Lending Obligation (CBLO), Recent Trends In Indian Money Market. Capital Market-Primary and Secondary Markets, Financial Sector Reforms inIndia.

UNIT 2: Mutual FundandInsurance

Lecture)

Mutual Fund – Evolution – Types – Advantages – Goals – Mutual Fund Industry – NAV – The Future Of Mutual Funds, **Insurance** – Insurance Companies - New Product Development – Reforms – Liberalization Of Insurance; IRDA – Economic Change – Insurance Revolution – Reform Proposals – Constitution Of IRDA – Objectives Of IRDA – Duties And Powers Of IRDA – New Regulations – Policy, HoldersInterest

- The Case For Interdependence - Banc Assurance InIndia

UNIT 3: Role of Time Value of MoneyinFinance

(13 Lecture) Time

Value of Money: Simple and Compound, Uniform Series Compound Interest Formula, Present Worth Analysis, Future Worth Analysis, Future Value through Annuity, Rate of Return Analysis, Cash flow diagrams; Depreciation: Introduction, Straight Line and Declining Balance Method of Depreciation; Project Evaluation Techniques: Present Worth Method, Future Worth Method, Annual Worth Method; Benefit-Cost Analysis: Conventional and Modified B/C Ratio with PWmethod

UNIT4:Derivatives (13Lecture)

Meaning And Purpose Of Derivatives - Forward Contracts, Future Contracts, Options and Swaps - Type Of Traders - Trading Future Contracts - Specification Of The Future Contracts - Operation Of Margins - Settlement And Regulations

Unit 5: ForeignExchangeMarkets

(13Lectures)

Foreign exchange markets: Nature- organization and participants. Exchange rates-determination, Types and system, Determination of exchange rates Under fixed and flexible exchange rate regimes - Role of hedging in the determination of exchangerates

Learning Outcome

- Students will be able to understand the concept of money and capital market, their distinction, role, functions and current status in IndianContext.
- Students will also be able to know mutual fund, its evolution, types andadvantages.

Subject Code	ECO349	Subject Title		Political Economy						
LTP	5 1 0	Credit	6	Subject Category	DSE II	Year	3 rd	Semester	V	

Course Objective:

- To provide the knowledge of global political and economicissues.
- To provide an academic credential necessary for successful employment in era ofglobalization.
- To buildlinkages between academic learning and the applied political and economic policy communities in government, private sector and voluntary and non-governmental sectors.

UNIT 1: Introduction and Historical Overview

(13 Lecture)

Perspective on political economy with a historical overview: capitalist development in the pre-second world war period, the golden age and later. Analysing social change in historical perspective: The method of historical materialism; the transition from feudalism to capitalism; capitalism as a historical process — alternative perspectives

UNIT 2: Changing Dynamics of Capitalist Production

(13 Lecture)

Fordist and post-fordist production; changing dynamics of organisation of production, markets and labour process; the changing nature of job security and labour rights. Capitalism as an evolving economic system: Basic features; accumulation and crisis; the modern corporation; monopoly capitalism— alternative perspectives.

UNIT 3: The State in the EraofGlobalization

(13 Lecture)

Globalization and the limits of the welfare state, development and state autonomy; The State in Capitalism: The state and the economy – contestation and mutual interdependence; the state as an arena of conflict; imperialism – the basicfoundations

UNIT 4: The Changing RoleofFinance

(13 Lecture)

The changing role of finance in capital accumulation and corporate structure; finance and globalization - financialisation, financial liberalization and financialcrisis

UNIT 5: The Social Dimension and New Perspectives

(13 Lectures)

Globalization and uneven development – growth, inequality and exclusion. Gender in work, accumulation and globalization; issues in environment and sustainability; alternativesahead.

Learning Outcome

- It would be helpful for students to analyses the political policy and its influence on economic development.
- Students would be able to intellectual roots of economicliberalism.
- 2 Student would be able to do empirical exercise on economic, political and public policies up to greater extent.

Text book [TB]:

Subject Code	ECO308	Subject Title		Мо	ney &Baı	nking			
LTP	5 1 0	Credit	6	Subject Category	UC	Year	3 rd	Semester	VI

Course Objective:

- This course exposes students to the theory and functioning of the monetary and financial sectors of the economy.
- The course enables students to learn structure and role of financial markets and institutions.

UNIT 1: Money Supply anditsFunction

(13 Lecture)

Money: Concept, functions, measurement; theories of money supplydetermination

UNIT 2: Concept of Financial MarketandInstitutions

(13 Lecture)

Financial Institutions, Markets, Instruments and Financial Innovations:a. Role of financial markets and institutions; problem of asymmetric information – adverse selection and moral hazard; financial crises.

b. Money and capital markets: organization, structure and reforms in India; role of financial derivatives and other innovations

UNIT 3: Interest Rate and Non-financial organizationsin India

(13 Lecture)

Interest rates in India, Non-financial organizations-Objective, aims, roles and structure; various forms of NFOs and NFIs in India, Role of NFIs in Indianeconomy

UNIT 4: Structure of Banking SysteminIndia

(13 Lecture)

IntroductionSCBsandcentralbanksandtheirroleand functions,Balancesheetandportfoliomanagement, Indian banking system: Changing role and structure; banking sectorreforms

UNIT 5: Central Banking and Monetary Policy

(13 Lectures)

Functions, balance sheet; goals, targets, indicators and instruments of monetary control, Inflation and its consequences and measurement, Monetary management in an open economy; current monetary policy of India

Learning Outcome

- The students will be able to discuss the recent performance of financial markets and government intervention strategies in light of economictheory.
- Examine the nature of money, definitions of the money supply and different approaches to determining how the money supply iscreated.

Text book [TB]:

- 1. Khan M. Y. (2011). Indian Financial System (7th ed.). Tata McGraw Hill.
- 2. Bhole L. M. and Mahukud J. (2011). Financial Institutions and Markets (5th ed.). Tata McGraw Hill.

Subject Code	ECO309	Subject Title	P	ublic Finance					
LTP	5 1 0	Credit	6	Subject Category	UC	Year	3 rd	Semester	VI

Course Objective:

- The Course provides understanding of government policy from the points of view of economic efficiency and equity.
- The paper deals with the nature of government intervention and its implications for allocation, distribution and and and and and are allocation.

UNIT 1: Public Finance and Public Goods

(13 Lecture)

Meaning and scope of public finance, public finance vs. private finance, fiscal functions-allocation, distribution and stabilization role of government, public goods - pure and partial public goods, private goods and merit goods, characteristics of public goods, rationale of public provision of public goods, free rider problem, voluntary exchange theory and Samuelson's theory of publicgoods

UNIT 2: Externalities andGovt. Policies

(13 Lecture)

Definition and types of externalities, Externalities and efficiency, Internalization of externalities: corrective taxes and subsidies, Coase theorem, significance of Coase theorem, application of Coase theorem and pollutionrights

UNIT 3:PublicRevenue (13Lecture)

Tax and non-tax revenue, direct and indirect taxes, effects of tax on production, distribution and economic activities. Principles of taxation – Benefit theory, Ability to pay theory, Burden of taxation: Neutrality in taxation, shifting and incidence of taxation, allocative and equity aspect of taxation.

UNIT 4: IndianPublicFinance-I

(13 Lecture)

Features of Indian tax system, tax revenues of the central and state governments, direct and indirect taxes levied by the state and centre, changing tax structure of India, Tax reforms since 1991: Chelliah Committee, Kelkar Committee reports, DTC,VAT andGST

UNIT 5: IndianPublicFinance-II

(13 Lectures) Budgetary

trend in India, trend of receipts and expenditures of Central Govt., Types of deficits: budgetary deficit, fiscal deficit, revenue deficit and primary deficit, Public debt: problems and issues, Fiscal federalism in India: Transfer of resources from centre to state-trends and techniques, an evaluation of finance commission awards and federal financing, suggestions to improve the federal finance relation in India.

Learning Outcome

- Student should be able to know the government taxation, expenditures pattern, public goods, market failures and externalities.
- 2 Students should be able to acquire the knowledge about government policy and revenue structure of country.

Text book [TB]:

- 1. Musgrave R.A. The Theory of Public Finance, McGraw Hill.

Subject Code	ECO356	Subject Title		En	vironment	al Econor	mics	
LTP	5 1 0	Credit	Subject Category	DSE III	Year	3 rd	Semester	VI

Course Objective:

- This course will introduce students to be aware of the meaning and nature of environmentaleconomics.
- The course also enables students to understand both the positive and normative aspects of environmentaleconomics.

UNIT 1: Environmental Economics - its Natureand Scope

(13 Lecture)

Nature and scope of environmental economics - Natural resource economics and ecological economics - Current state of the environment - Use of economics to analyses environmentalissues

UNIT 2: Principles of Environmental andResourceEconomics

(13 Lecture)

Welfare Economics – Sustainability – Efficiency - benefit-cost analysis - Alternative approaches to evaluate environmental policies - Externalities and Property Rights - Coase theorem and theories onit

UNIT 3:ControllingPollution

(13Lecture)

Pigouvian fees - Regulation - Government intervention - Advantages and disadvantages of a command and control approach - Efficiency and Cost-effectiveness of regulations - Marketable Permits: the theoretical basis for a marketable permit approach; practical challenges in using marketable permits

UNIT 4: Green Accounting

(13Lecture)

Green Accounting - Use of permits to reduce greenhouse gas emissions - Regulation under Uncertainty - Effectiveness of regulation under imperfect information - Monitoring and enforcement of pollution levels - Risk - incorporation of risk and uncertainty into models.

UNIT 5:EconomicValuation

(13Lectures)

Introduction - Valuation of the environment, what is value of ecosystem services, role of ecosystem services in economic development, Market and Non-Market valuation (Contingent Valuation Methods, Travel Cost Method, Willingness to Pay), Few cases on valuation of ecosystem services of water, soil, and forestry

Learning Outcome

- The students will have an idea of both the positive and normative aspects of environmental economics.
- The students will also be able to measure the different approaches and technique of controlling pollution.

Subject Code	ECO357	Subject Title			Labo	r Economic	:s		
LTP	5 1 0	Credit	ь	Subject Category	DSE III	Year	3 rd	Semester	VI

Course Objective:

- To acquire knowledge about nature, Scope and Importance of Labour and LabourMarket.
- This course focuses on the wage determination, migration, and industrial relations in developing con try likelndia.

UNIT1: Introduction (13Lecture)

Meaning- Concept, Significance and Pecularities of Labour. Nature, Scope and Importance of Labour Economics. Characteristics of Indian Labour Market

UNIT 2:WageDetermination

(13Lecture)

Marginal Productivity Theory, Theory of Collective Bargaining, Modern Theory of Wages. Minimum Wage and Fair Wage. Wage Determination in – Organised- Unorganised Sector

UNIT 3: MigrationandAbsenteeism

(13 Lecture)

Approaches to Labour Migration trends & effects of Migration. Absenteeism to Industrial Labour in India, causes, effects and remedies. Labour turnover - Trends in Labour Turnover inIndia

UNIT 4:IndustrialRelations

(13Lecture)

Labour Unions in India- Growth, Pattern, Structure and Achievements of Labour Union in India. Causes of Industrial Disputes and their settlement and preventive mechanism, Current trends in Collective Bargaining, Social SecurityMeasures

UNIT 5: LabourMarketreforms

(13Lectures)

Child Labour Policy in India, Problems and Policy of Female Workers in India, Labour Relations in India, Contract Labour

Learning Outcome

- The students should be able to acquire knowledge about wage determination especially organized and unorganized sector.
- The students will develop the knowledge about labour migration, labour market reform and industrial relations.

Text book [TB]:

- 1. Datt G (1996). Bargaining Power, Wages and Employment: An Analysis of Agricultural, Labour: Markets in India. Sage Publications, NewDelhi...

Subject Code	ECO358	Subject Title		Ec	onomics of H	lealth and	d Educat	ion	
LTP	5 1 0	Credit	6	Subject Category	DSE IV	Year	3rd	Semester	VI

Course Objective:

- To provide importance of health and education and its impact on economic and social development.
- It would also give the concreate overview of health and education inIndia.

UNIT 1: Role of Health and Education inHumanDevelopment

(13 Lecture)

Importance in poverty alleviation; health and education outcomes and their relationship with macroeconomic performance. Prime indicators of health and education, interaction and association of health and education related indicators, measurement of health and education at micro to macrolevel

UNIT 2: Microeconomic Foundations of Health Economics

(13Lecture)

Demand for health; uncertainty and health insurance market; alternative insurance mechanisms. Market failure and rationale for public intervention; equity and inequality

UNIT 3: Evaluation of Health Programs

(13 Lecture)

Costing, cost effectiveness and cost-benefit analysis; burden of disease. Alternative measurement of progress of health programs at individual level, index based estimation of health programs at micro to macrolevel

UNIT 4: Health Sector in India: An Overview

(13Lecture)

Health outcomes; health systems; health financing.

UNIT 5: Education: Investment inHumanCapital

(13 Lectures)

Rate of return to education: private and social; quality of education; signaling or human capital; theories of discrimination; gender and caste discrimination in India. Education Sector in India: An Overview: Literacy rates, school participation, school qualitymeasures.

Learning Outcome

- 2 Students will be able to understand the role of education and health in sustainabledevelopment.
- 2 Students will be logically thinker to formulate a micro level policies to enhance the education and health level at greater extent.

Text book [TB]:

LTP	5 1 0	Credit	6	Subject Category	DSE IV	Year	3 rd	Semester	VI

Course Objective:

- To provide the knowledge to the students on comparative economicdevelopment.
- The objective of this course is to make a comparative study of the economic development among the developed countries

UNIT 1: Introduction and Perspectives on Economic Development

(13

Lecture) Perspectives of comparative economic development, Features of and trend in modern economic growth in India and other developed and developing economies, A brief discussion on Kuznet's curve and its findings, Implications of Kuznets' curve in developed and developing economies; Criticism of Kuznet's curve; Gerschenkron's hypothesis of economic development in historical perspective

UNIT 2: An Overview of Economic Development of TheSelectedCountries

(13
