**Course Structure & Syllabus**  
**for**  
**Pre Ph.D. (Mathematics) Course Work**  
**Session: 2019-20**

## Pre-Ph.D. (Mathematics)

Course Category	Course Code	Course Name	Periods			Credits
			L	T	P	
UC	MB901	Research Methods	4	0	0	4
DC	MA601	Advanced Mathematics	4	0	0	4
DE		Elective 1	4	0	0	4
DE		Elective 2	4	0	0	4
DC	DS001	Seminar	1	0	0	1

<b>List of Elective</b>		
S.No.	Course Code	Course Title
1	MA747	Fuzzy Sets and Applications
2	MA749	Mathematical Modelling and Simulations
3	MA757	Numerical Solution of PDE's
4	MA758	Integral Equations & Calculus of Variations
5	MA759	Dynamical Systems
6	MA766	Magneto hydrodynamics
7	MA767	Thermal Instabilities and Methods
8	MA768	Statistical Techniques
9	CS753	Distributed System

*Note : Apart from above listed Elective courses, Research Scholar may choose any course across departments being offered at PG level, if it is required/suggested by the Research Committee.*

## Pre-Ph.D. (Mathematics)

<b>Subject Code</b>	<b>MB901</b>	<b>Subject Title</b>	<b>Research Methodology</b>						
<b>LTP</b>	4 0 0	<b>Credit</b>	4	<b>Subject Category</b>	UC	<b>Year</b>	1 <sup>st</sup>	<b>Semester</b>	I / II

### UNIT – I

**Fundamentals of Research:** Defining research, Objectives of research, types, research process, deductive and inductive reasoning;

Identifying and formulating a research problem, Literature review: Search for existing literature (World Wide Web, Online data bases), Review the literature selected (Case studies, review articles and Meta-analysis), Develop a theoretical and conceptual framework, Writing up the review,

Definition of variables: Concepts, indicators and variables, Types of variables, Types of measurement scales, Constructing the Hypothesis- Null(Research) and alternative, one-tailed and two-tailed testing, errors in testing. Ethical and Moral Issues in Research, Plagiarism, tools to avoid plagiarism – Intellectual Property Rights – Copy right laws – Patent rights

### UNIT – II

**Research Design:** Design of Experiments: Research Designs -Exploratory, Descriptive and Experimental, Experimental designs- Types of Experimental Designs

### UNIT – III

**Sampling, Sampling distribution, and Data Collection:** Sampling distribution, Normal and binomial distribution, Reasons for sampling, sampling technique, sampling errors.Sources of Data-Primary Data, Secondary Data, Data Collection methods

### UNIT – IV

**Statistical Data Analysis:** Descriptive and inferential statistical analysis. Testing of hypothesis with Z-test, T-test and its variants, Chi-square test, ANOVA, Correlation, Regression Analysis, Introduction to data analysis data using SPSS20.0

### UNIT – V

**Research Report:** Writing a research report- Developing an outline, Formats of Report writing, Key elements-Objective, Introduction, Design or Rationale of work, Experimental Methods, Procedures, Measurements, Results, Discussion, Conclusion, Referencing and various formats for reference writing of books and research papers, Writing a Research Proposal.

### Books Recommended:

1. Ganesan R, Research Methodology for Engineers , MJP Publishers, Chennai. 2011
2. C.R.Kothari, "Research Methodology", 5<sup>th</sup> edition, New Age Publication,
3. Cooper, "Business Research Methods", 9<sup>th</sup> edition, Tata McGraw hills publication
4. Walpole R.A., Myers R.H., Myers S.L. and Ye, King: Probability & Statistics for Engineers and Scientists, Pearson Prentice Hall, Pearson Education, Inc. 2007.
5. Anderson B.H., Dursaton, and Poole M.: Thesis and assignment writing, Wiley Eastern 1997.
6. Bordens K.S. and Abbott, B.b.: Research Design and Methods, McGraw Hill, 2008.
7. Morris R Cohen: An Introduction to logic and Scientific Method (Allied Publishers) – P 197-222; 391–403

## Pre-Ph.D. (Mathematics)

<b>Subject Code</b>	<b>MA601</b>	<b>Subject Title</b>	<b>Advanced Mathematics</b>						
<b>LTP</b>	4 0 0	<b>Credit</b>	4	<b>Subject Category</b>	DC	<b>Year</b>	1 <sup>st</sup>	<b>Semester</b>	I / II

### Unit I: Numerical Techniques

Zeros of Transcendental and Polynomial equation using bisection method, Newton-Raphson method, Rate of convergence of above methods. Interpolation: Finite differences, difference tables, Newton's Forward and Newton's Backward Interpolation, Lagrange's and Newton divided difference formula for unequal intervals. Solution of system of Linear equations, Gauss-Seidal method, Crout method. Numerical Integration: Trapezoidal rule, Simpson's one-third rule, Simpson's three-eighth rule, Solution of ordinary differential (first order, second order and simultaneous) equations by Picard's and Fourth order Runge-Kutta methods

### Unit II: Partial Differential Equations (PDE)

Formation and Classification of PDE, Solution of One Dimension Wave Equation, and Heat Equation, Two Dimension Heat and Laplace Equation by Separation of variables Method.

### Unit III: Special Functions

Series solution of ODE of 2<sup>nd</sup> order with variable coefficient with special emphasis to Legendre and Bessel differential equation, Legendre polynomial of first kind, Bessel Function of first kind and their properties.

### Unit IV: Statistics

Elements of statistics, frequency distribution: concept of mean, median, mode, Standard deviation, variance and different types of distribution: Binomial, Poisson and Normal distribution, curve fitting by least square method, Correlation and Regression, Concept of Hypothesis Testing.

### Unit V: Optimization

Formulation, Graphical method, Simplex method, Two-Phase simplex method, Duality, Primal-dual relationship, Dual-simplex method.

### Recommended Books:

1. R. K. Jain & S. R. K. Iyenger: *Advanced Engineering Mathematics*, 4<sup>th</sup> Edition, Narosa publication, 2014.
2. M.K. Jain, S.R.K. Iyenger & R.K. Jain: *Numerical Methods for Scientific & Engg. Computation*, New age International Publishers, (Reprint) 2007.
3. S. C. Gupta & V. K. Kapoor: *Fundamentals of Statistics: 11<sup>th</sup> Edition*, Sultan Chand & Sons, (Reprint) 2014.
4. E. Kreyszig: *Advanced Engineering Mathematics*, 10<sup>th</sup> Edition, Wiley publication, , 2011.
5. B.S. Grewal: *Higher Engineering Mathematics*, 42<sup>nd</sup> Edition, Khanna Publication, India, 2012.

## Pre-Ph.D. (Mathematics)

<b>Subject Code</b>	<b>MA747</b>	<b>Subject Title</b>	<b>Fuzzy Sets and Applications</b>						
<b>LTP</b>	4 0 0	<b>Credit</b>	4	<b>Subject Category</b>	DE	<b>Year</b>	1 <sup>st</sup>	<b>Semester</b>	I / II

**Course Objectives:** The objective of this course is to teach the students the need of fuzzy sets, arithmetic operations on fuzzy sets, fuzzy relations, possibility theory, fuzzy logic, and its applications

### Unit I

**Classical and Fuzzy Sets:** Overview of classical sets, Membership function, A-cuts, Properties of a-cuts, Extension principle.

**Operations on Fuzzy Sets:** Compliment, Intersections, Unions, Combinations of operations, Aggregation operations.

### Unit II

**Fuzzy Arithmetic:** Fuzzy numbers, Linguistic variables, Arithmetic operations on intervals and numbers, Fuzzy equations.

**Fuzzy Relations:** Crisp and fuzzy relations, Projections and cylindric extensions, Binary fuzzy relations, Binary relations on single set, Equivalence, Compatibility and ordering Relations, Morphisms, Fuzzy relation equations.

### Unit III

**Possibility Theory:** Fuzzy measures, Evidence and possibility theory, Possibility versus probability theory.

**Fuzzy Logic:** Classical logic, Multivalued logics, Fuzzy propositions, Fuzzy qualifiers, Linguistic hedges.

### Unit IV

**Applications of Fuzzy Logic:** Washing machines, Control systems engineering, Power engineering and Optimization.

### Course Learning Outcomes (CLO):

Upon completion of this course, the student will be able to:

- 1) construct the appropriate fuzzy numbers corresponding to uncertain and imprecise collected data.
- 2) handle the problems having uncertain and imprecise data.
- 3) find the optimal solution of mathematical programming problems having uncertain and imprecise data.
- 4) Deal with the fuzzy logic problems in real world problems.

### Recommended Books:

1. G. J. Klir and Folger T.A.: *Fuzzy Sets, Uncertainty and Information*, 1<sup>st</sup> Edition edition, Prentice Hall Inc.,1988.
2. G.J. Klir and Yuan B.: *Fuzzy Sets and Fuzzy logic: Theory and Applications*, PHI, 1997.
3. H.J. Zimmermann: *Fuzzy Set Theory and its Applications*, 4<sup>th</sup> Edition, Allied Publishers, 2001.
4. J. Yen and R. Langari, *Fuzzy Logic: Intelligence, Control, and Information*, Pearson Education, 2003.

# Pre-Ph.D. (Mathematics)

<b>Subject Code</b>	<b>MA749</b>	<b>Subject Title</b>	<b>Mathematical Modelling and Simulations</b>						
<b>LTP</b>	4 0 0	<b>Credit</b>	4	<b>Subject Category</b>	DE	<b>Year</b>	1 <sup>st</sup>	<b>Semester</b>	I / II

## Objective:

The goals of the course are as under:

1. Introduce students to the elements of the mathematical modeling process.
2. To understand the basic rules of logic, including the role of axioms or assumptions and appreciate the role of mathematical proof in formal deductive reasoning.
3. To develop ability to distinguish a coherent argument from a fallacious one, both in mathematical reasoning and in everyday life.
4. To make them understand and be able to articulate the differences between inductive and deductive reasoning
5. Students may proficiently construct logical arguments and rigorous proofs and formulate conjectures by abstracting general principles from examples.

## Unit I

### Introduction

Models, reality, Properties of models, model classification and characterization, steps in building mathematical models, sources of errors, dimensional analysis.

Modeling using Proportionality, Modeling using Geometric similarity; graphs of a functions as models.

**Model Fitting** – Fitting models to data graphically, Analytic methods of model fitting, Applying the least square criterion,

**Experimental Modeling** – High order polynomial models, Cubic Spline models.

## Unit II

**Discrete Probabilistic Modeling** – Probabilistic modeling with discrete system; Modeling components & System Reliability; Linear Regression.

**Discrete Optimization Modeling** – Linear Programming – Geometric solutions, Algebraic Solutions, Simplex Method and Sensitivity Analysis.

## Unit III

**Modeling with a Differential Equations** – Population Growth, Graphical solutions of autonomous differential equations, numerical approximation methods-- Euler's Method and R.K. Method.

**Modeling with systems of Differential Equations** – Predator Prey Model, Epidemic models, Euler's method for systems of Differential equations.

## Unit IV

**Simulation Modeling** – Discrete-Event Simulation, Generating random numbers; Simulating probabilistic behavior; Simulation of Inventory model and Queueing Models using C program.

Other Types of simulation—Continuous Simulation, Monte-Carlo simulation. Advantages, disadvantages and pitfalls of simulation

**Case Study:** Case Studies for various aspects of modeling to be done.

## Course Outcomes (CO):

1. Translate everyday situations into mathematical statements (models) which can be solved/analyzed, validated, and interpreted in context.
2. Identify assumptions which are consistent with the context of the problem and which in turn shape and define the mathematical characterization of the problem.
3. Revise and improve mathematical models so that they will better correspond to empirical information and/or will support more realistic assumptions.
4. Assess the validity and accuracy of their approach relative to the problem requirement.

## **Pre-Ph.D. (Mathematics)**

5. Apply tools to mathematically analyze and solve contemporary problems of both theoretical and practical importance and recognize the power of mathematical modelling and analysis and be able to apply their understanding to their further studies.

### **Recommended Books:**

1. Frank R. Giordano, Maurice D Weir & William P. Fox: *A first course in Mathematical Modeling*, 3rd Edition, Thomson Brooks/Cole, Vikas Publishing House (P) Ltd., 2003.
2. J.D. Murray: *Mathematical Biology – I*, 3rd Edition, Springer International Edition, 2004.
3. J.N. Kapoor: *Mathematical Models in Biology and Medicine*, East West Press, New Delhi, 1985.
4. Robert E. Shannon: *Systems Simulation: The Art and Science*, Prentice Hall, U.S.A, 1975.
5. Averill M. Law & W. David Kelton: *Simulation Modeling and Analysis*, 3<sup>rd</sup> Edition, Tata McGraw Hill, 1999.

## Pre-Ph.D. (Mathematics)

<b>Subject Code</b>	<b>MA757</b>	<b>Subject Title</b>	<b>Numerical Solution of PDE's</b>						
<b>LTP</b>	4 0 0	<b>Credit</b>	4	<b>Subject Category</b>	DE	<b>Year</b>	1 <sup>st</sup>	<b>Semester</b>	I / II

**Objective:** The objective of the course to teach the students the principles for designing numerical schemes for PDEs, in particular, finite difference schemes., explicit & implicit schemes in 1D problem.

### Unit-I

Numerical solutions of parabolic PDE in one space: two and three levels explicit and implicit difference schemes. Convergence and stability analysis.

### Unit-II

Numerical solution of parabolic PDE of second order in two space dimension: implicit methods, alternating direction implicit (ADI) methods. Nonlinear initial BVP. Difference schemes for parabolic PDE in spherical and cylindrical coordinate systems in one dimension.

### Unit-III

Numerical solution of hyperbolic PDE in one and two space dimension: explicit and implicit schemes. ADI methods. Difference schemes for first order equations.

### Unit-IV

Numerical solutions of elliptic equations, approximations of Laplace and biharmonic operators. Solutions of Dirichlet, Neuman and mixed type problems. Finite element method: Linear, triangular elements and rectangular elements.

**Practical's:** Based on the above contents.

**Course Outcomes (CO):** After the successful completion of the course, the student will be able to:

1. analyze the consistency, stability and convergence of a numerical scheme.
3. identify what kind of numerical methods are best suited for each type of PDEs (hyperbolic, parabolic and elliptic).
4. make a connection between the mathematical equations or properties and the corresponding physical meanings.
5. use a programming language (C, C++, Python etc.) or math software (Matlab, Maple or Mathematica) to implement and test the numerical schemes. (\*depending on the availability of time and software)

### Recommended Books:

1. M. K. Jain, S. R. K. Iyenger and R. K. Jain: *Computational Methods for Partial Differential Equations*, Wiley Eastern, 1994.
2. M. K. Jain: *Numerical Solution of Differential Equations*, 2nd edition, Wiley Eastern.
3. S. S. Sastry: *Introductory Methods of Numerical Analysis*, 3<sup>rd</sup> Edition, Prentice-Hall of India, 2002.
4. D. V. Griffiths and I. M. Smith: *Numerical Methods for Engineers*, 2<sup>nd</sup> Edition, Oxford University Press, 2006..
5. C. F. Gerald and P. O. Wheatley: *Applied Numerical Analysis*, 7<sup>th</sup> Edition, Pearson Addison- Wesley, 2004.

# Pre-Ph.D. (Mathematics)

<b>Subject Code</b>	<b>MA758</b>	<b>Subject Title</b>	<b>Integral Equations &amp; Calculus of Variations</b>						
<b>LTP</b>	4 0 0	<b>Credit</b>	4	<b>Subject Category</b>	DE	<b>Year</b>	1 <sup>st</sup>	<b>Semester</b>	I / II

## Course Objective:

The main goal of this course is to introduce fundamental concepts and some standard results of the integral equations and calculus of variations without using deep knowledge of functional analysis.

## Unit 1

Inner Product spaces, Norm, Hilbert space, Regularity Conditions, Special kinds of Kernel, Classification of integral equation, Convolution integral, Relation between differential and integral equations, Classification, Conversion of Volterra Equation to ODE, Conversion of IVP and BVP to Integral Equation.

## Unit 1I

Fredholm integral equations, Solution of Fredholm integral equation using decomposition method, direct computation, Adomian decomposition, successive approximation and successive substitution methods.

Volterra Integral equations, Solution of Volterra integral equation using successive approximation method, Adomian decomposition method, series solution, successive substitution method, resolvent kernel, Volterra integral equation of first kind, Integral equations with separable kernels.

## Unit 1II

Fredholm's first, second and third theorem, Integral Equations with symmetric kernel, Eigen function expansion, Hilbert-Schmidt theorem, Fredholm and Volterra-Integro-Differential equation, Operator method in the theory of integral equations, Rayleigh-Ritz method for finding eigenvalue, Singular Integral Equation. Numerical Methods for solving Integral equations (Collocation method, least square method).

## Unit IV

Introduction, problem of Brachistochrone, Isoperimetric problem, Variation and its properties, functions and functionals, Variational problems with the fixed boundaries, Euler's equation, Functionals in the form of integrals, special cases containing only some of the variables, Functionals involving more than one dependent variables and their first derivatives, the system of Euler's equations, Functionals depending on the higher derivatives of the dependent variables, Functionals containing several independent variables, Variational problems in parametric form.

## Unit V

Variational problems with moving boundaries, one sided variations, variational problems with subsidiary conditions, Isoperimetric problems, Numerical methods for solving variational problems, Rayleigh – Ritz method, Galerkin's Method.

**Course Outcomes (CO):** At the end of the course, student will be able to

1. fully understand the properties of geometrical problems.
2. be familiar with variational problems.
3. be familiar isoperimetric problems.
4. be thorough with different types of integral equations.
5. be exposed to the decomposition method.

## Recommended Books:

1. Ram P. Kanwal: *Linear Integral Equations Theory and Technique*, 2<sup>nd</sup> Edition, Birkhauser, 2013..
2. I. M. Gelfand, S. V. Fomin: *Calculus of variations*, 3<sup>rd</sup> Edition, Prentice-Hall, 1963.

## Pre-Ph.D. (Mathematics)

<b>Subject Code</b>	<b>MA759</b>	<b>Subject Title</b>	<b>Dynamical Systems</b>						
<b>LTP</b>	4 0 0	<b>Credit</b>	4	<b>Subject Category</b>	DE	<b>Year</b>	1 <sup>st</sup>	<b>Semester</b>	I / II

### Unit I

**Equilibrium Solutions, Stability, and Linearized Stability for vector fields and maps, Lyapunov Functions, Invariant Manifolds: Linear and Nonlinear Systems for vector fields and maps, Periodic orbits**

### Unit II

**Some General Properties of Vector Fields: Existence, Uniqueness, Differentiability, and Flows, Asymptotic Behavior, Poincare Maps.**

### Unit III

Center Manifolds for Vector Fields, Center Manifolds Depending on Parameters, Center Manifolds for Maps, Properties of Center Manifolds, Normal form for vector fields, Normal form for vector fields with parameters, Normal forms for maps.

### Unit IV

Bifurcation of Fixed Points of Vector Fields, The Saddle-Node Bifurcation, The Transcritical Bifurcation, The Pitchfork Bifurcation, Codimension of a Bifurcation

### Unit V

Bifurcations of Fixed Points of Maps, The Saddle-Node Bifurcation, The Transcritical Bifurcation, The Pitchfork Bifurcation, Period Doubling, Codimension of Bifurcations of Maps

### **Recommended Books:**

1. *Stephen Wiggins: Introduction to Applied Nonlinear Dynamical Systems and Chaos, 2<sup>nd</sup> Edition, Springer, New York.*
2. *D. K Arrowsmith, C. M Place: An Introduction to dynamical system, 1<sup>st</sup> Edition, Cambridge University Press, 1990.*
3. *Yuri Kuznetsov: Elements of applied bifurcation theory, 3<sup>rd</sup> Edition, Springer-Verlag New York, 2004.*

## Pre-Ph.D. (Mathematics)

<b>Subject Code</b>	<b>MA766</b>	<b>Subject Title</b>	<b>Magneto hydrodynamics</b>						
<b>LTP</b>	4 0 0	<b>Credit</b>	4	<b>Subject Category</b>	DE	<b>Year</b>	1 <sup>st</sup>	<b>Semester</b>	I / II

### Unit I

Basic concepts of Magneto-hydrodynamics and its applications, Maxwell's equations, Frame of reference, Lorentz force, Electromagnetic body force.

### Unit II

Fundamental equations of MHD, Ohm's law for a moving conductor, Hall current, Conduction current, Kinematic aspect of MHD, Magnetic Reynolds number, MHD waves: Alfven's waves, MHD waves in compressible fluid, MHD approximations.

### Unit III

Electromagnetic boundary conditions, One dimensional MHD flow, Hartmann flow, MHD Couette flow, MHD Stoke's flow, MHD Rayleigh's flow, Hartmann-Stoke's boundary layer, Alfven's boundary layer.

### Unit IV

Two dimensional MHD flow (a) Aligned flow (b) Stagnation point flow, MHD flows in a rotating medium, Effects of Hall current on MHD flows in a rotating channel, MHD heat transfer.

### Recommended

1. T. G. Cowling: *Magnetohydrodynamics*, Interscience Publishers New York, 1957.
2. J.A. Shercliff: *A Text Book of Magnetohydrodynamics*, 1<sup>st</sup> Edition, Pergamon Press, Oxford, 1965.
3. S.I. Pai: *Magnetohydrodynamics and Plasma Dynamics*, 1<sup>st</sup> Edition, Springer Verlag, New York, (2<sup>nd</sup> Reprint)1963.
4. K. R. Cramer and S. I. Pai: *MagnetofluidDynamics for Engineers and Applied Physicists*, McGraw Hill, New York, 1973.

### Books:

## Pre-Ph.D. (Mathematics)

<b>Subject Code</b>	<b>MA767</b>	<b>Subject Title</b>	<b>Thermal Instabilities and Methods</b>						
<b>LTP</b>	4 0 0	<b>Credit</b>	4	<b>Subject Category</b>	DE	<b>Year</b>	1 <sup>st</sup>	<b>Semester</b>	I / II

### Unit I

Fundamentals of hydrodynamic stability, Rayleigh-Benard convection, concepts of porous medium, Darcy's law, Brinkman equation, equations for conservation of mass, momentum and energy in fluid and porous medium, Boussinesq approximations, boundary conditions, normal modes, cell patterns.

### Unit II

Heat and mass transfer in fluid and porous medium, Convection under rotation. Magnetic field and solute gradient. Nonlinear stability. Introduction to Nano fluids, Ferro fluids and polar fluids.

### Unit III

Mechanism of instability, various types of convection instabilities; Rayleigh-Benard convection, Oberbeck convection, magneto-convection, Marangoni convection, magneto-Marangoni convection, magnetic fluid convection, electro convection, double diffusive convection, cross diffusion convection, biconvection.

### Unit IV

Boundary conditions. Techniques to solve linear and nonlinear instability problems; Galerkin technique, perturbation techniques involving regular and singular perturbations.

### Unit V

Truncated representation of Fourier series (finite amplitude technique), numerical techniques, moment method, energy method, power integral technique, Spectral method.

### Recommended Books:

1. D.A. Nield, A. Bejan: *Convection in Porous Medium, 5<sup>th</sup> Edition, Springer International Publishing, 2017.*
2. S.K. Som & G. Biswas: *Introduction to Fluid Mechanics and Fluid Machines, Revised 2<sup>nd</sup> Edition, Tata McGraw-Hill, 2010.*
3. P.G. Drazin, W.H. Reid: *Hydrodynamic Stability, 2<sup>nd</sup> Edition, Cambridge University Press, 2004.*
4. S. Chandrasekhar: *Hydrodynamic and Hydromagnetic Stability, Dover Publications, Dover Edition, 2013.*

## Pre-Ph.D. (Mathematics)

<b>Subject Code</b>	<b>MA768</b>	<b>Subject Title</b>	<b>Statistical Techniques</b>						
<b>LTP</b>	4 0 0	<b>Credit</b>	4	<b>Subject Category</b>	DE	<b>Year</b>	1 <sup>st</sup>	<b>Semester</b>	I / II

### Unit I: Stochastic Processes

Markovian property, continuous time Markov Chains, Poisson Process, Birth and Death Process, Application in Insurance and Finance. Brownian Motion: Basic concepts of Stochastic Differential equations, Ito integrals, Geometric Brownian motion.

### Unit II: Sampling

Simple random sampling, Stratified random sampling, PPS –sampling, Lahiri’s scheme and Des Raj estimator, Murthy estimator (for  $n=2$ ). Horvitz Thompson Estimator of finite population total/mean, Expression for Variance (HTE) and its unbiased estimator.

### Unit III: Inference

point estimation, interval estimation, hypothesis testing, two type of errors, power function, shortest confidence interval, Cramer-Rao inequality, minimal sufficiency, Rao-Blackwell theorem.

### Unit IV: Decision Theory

Basic elements of Statistical Decision Problem. Expected loss, decision rules (nonrandomized and randomized), decision principles, inference as decision problem, optimal decision rules. Bayes and minimax decision rule. Admissibility of minimax rules and Bayes rules.

### Recommended Books:

1. Sheldon M. Ross: *S. Stochastic Processes, 2<sup>nd</sup> Edition, John Wiley and Sons, New York, 1996.*
2. E.L. Lehmann. and Romano J.P: *Testing Statistical Hypotheses, 3<sup>rd</sup> Edition, Springer-Verlag New York, 2005.*
3. E.L. Lehmann and George Casella: *Theory of Point Estimation, 2<sup>nd</sup> Edition, Springer Inc., 1998.*

## Pre-Ph.D. (Mathematics)

<b>Subject Code</b>	<b>MA753</b>	<b>Subject Title</b>	<b>Distributed System</b>						
<b>LTP</b>	4 0 0	<b>Credit</b>	4	<b>Subject Category</b>	DE	<b>Year</b>	1 <sup>st</sup>	<b>Semester</b>	I / II

**Objective:** The main goal of course is to learn the principles, architectures, algorithms and programming models used in distributed systems.

### Unit I

Fundamentals of Distributed Computing: Architectural models for distributed computing systems, Issues and challenges in Distributed systems, Basic concepts in distributed computing such as clocks, message ordering, consistent global states.

Distributed Environments, Current systems and developments (DCE, CORBA, JAVA).

### Unit II

Coordination & Synchronization: Introduction, Distributed Mutual Exclusion, Elections, Multicast Communication, Atomic transactions, Deadlocks in Distributed systems.

Message Passing & Remote Procedure Calls: Features of a good message-passing system, RPC model. Implementing RPC mechanism, Stub Generation, RPC Messages, Marshaling Arguments and Results, Server Management, Communication protocols for RPCs.

### Unit III

Distributed File Systems: Features of Good DFS, File Models, File-Accessing models, File Service Architecture, File-sharing semantics, File Caching schemes, File replications.

### Unit IV

Distributed Shared Memory: Shared memory consistency models, Page based distributed shared memory, Shared variable distributed shared memory, Object based distributed shared memory.

Replication: Introduction, System Model & Group Communication, Fault Tolerant Services, Transactions with Replicated Data.

### Unit V

Advanced Topics in Distributed Computing: High Performance Computing-HPF, Distributed and mobile multimedia systems. Adaptability in Mobile Computing. Grid Computing and applications. Fault tolerant Computing Systems.

### Course Outcome (CO):

The primary learning outcome of the course is two-fold:

1. Students will identify the core concepts of distributed systems: the way in which several machines orchestrate to correctly solve problems in an efficient, reliable and scalable way.
2. Students will examine how existing systems have applied the concepts of distributed systems in designing large systems, and will additionally apply these concepts to develop sample systems.

### Recommended Books:

1. Tannenbaum, A, Van Steen, Distributed Systems, Principles and Paradigm, Prentice Hall India, 2002.
2. Tannenbaum, Distributed Operating Systems, A. Pearson Education, 2006.
3. Attiya, Welch, Distributed Computing, Wiley India, 2006.
4. Singhal and Shivaratri, "Advanced Concepts in Operating Systems", McGraw Hill, 1994
